

ELISE action  
Webinar Series

# *Exploring Digital Government Transformation in the EU*

*Understanding public sector  
innovation in a data-driven  
society*

Gianluca MISURACA, European Commission JRC

25/08/2020 at 15:00 CEST (UTC+2)

ISA<sup>2</sup>

European Location Interoperability  
Solutions for e-Government

*Enabling Digital Government through  
Geospatial and Location Intelligence*

# ELISE action Webinar Series

## *Welcome & Introduction*

Francesco PIGNATELLI,  
ELISE Action Leader  
European Commission JRC, Ispra

European Location Interoperability  
Solutions for e-Government

*Enabling Digital Government through  
Geospatial and Location Intelligence*

# Exploring Digital Government Transformation in the EU

*Understanding public sector innovation in a data-driven society*

*Gianluca Misuraca, Senior Scientist  
European Commission, JRC Seville*

*Final DigiGov Webinar, 25 August 2020*

# Outline

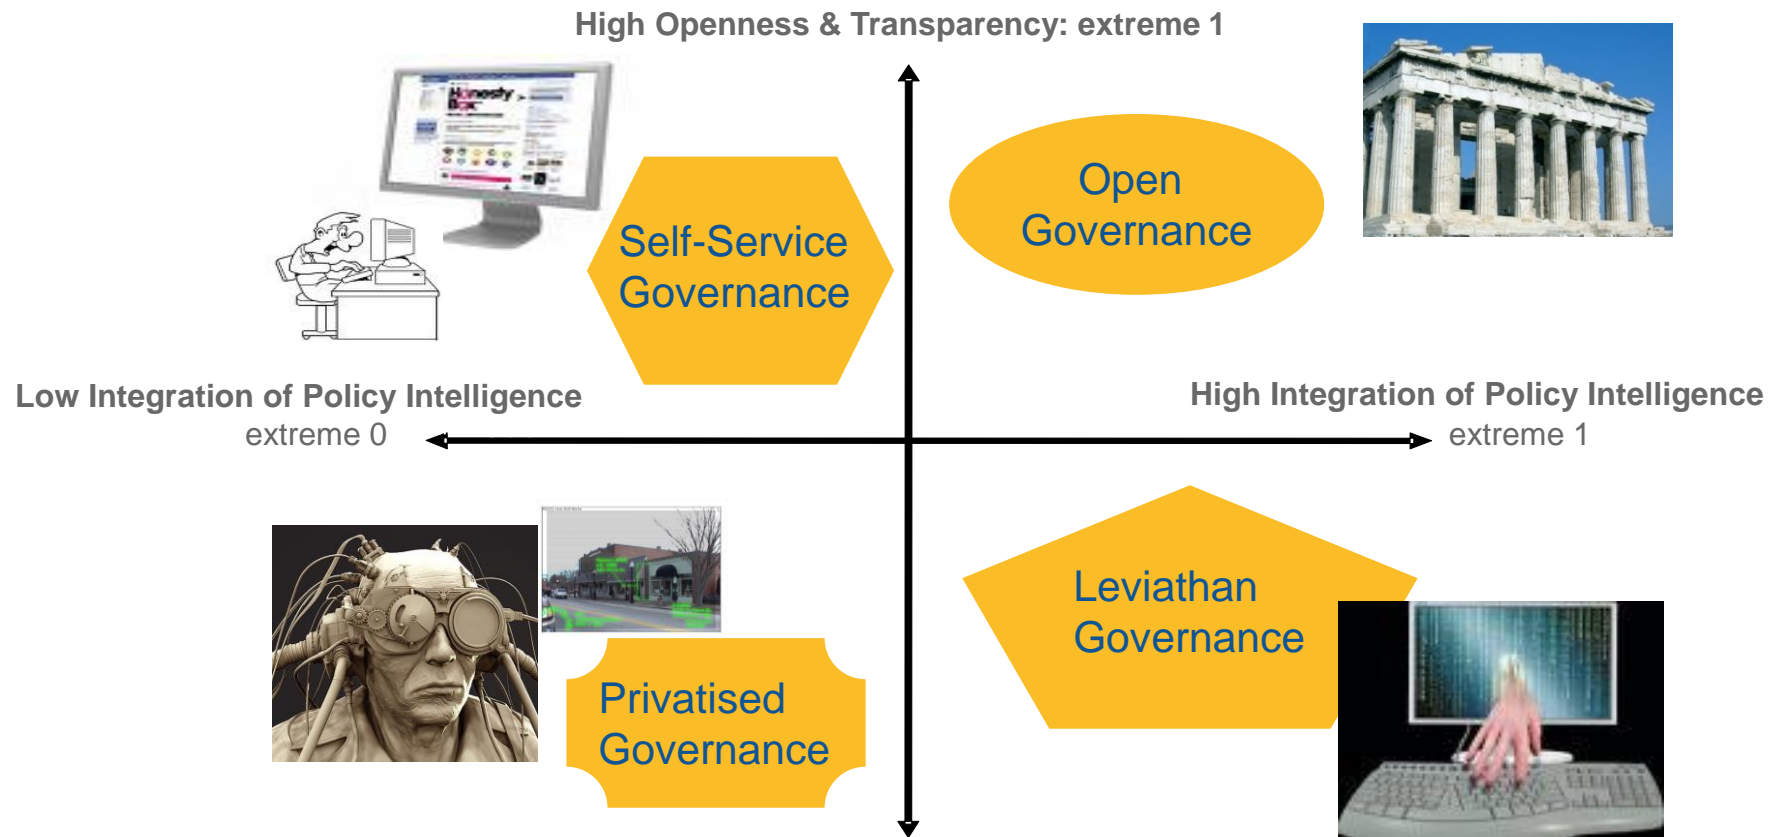

1. Envisioning Digital Europe 2030: *10 years later...*
2. DigiGov: background, objectives and results
3. Back to the future: Shaping Digital Europe 2040
4. Policy implications and future research

# Envisioning Digital Europe 2030: *10 years later*

# The “new” role of JRC in the new Commission *Navigating through Innovation & Foresight*

# Envisioning Digital Europe 2030 (in 2010)

# DigiGov: Background, objectives & results

# Background: 10 (more) years of eGov in (declar)ation

- eGovernment Action Plan 2020: a decade of work on Open & Trusted Government since [Malmoe 2009](#)
- [2017 Tallinn Declaration](#) on user-centric eGovernment
- [2018 Vienna Conference](#) on Digital & eGovernment
- [2019 Helsinki Conference](#) on Human-centric Digital Government
- The [2020 Digital Strategy for Europe](#), with a crucial role for AI adoption in government & the public sector
- The forthcoming [Digital Europe Programme](#)... in the emerging “Pandemic society” ...

# Objectives

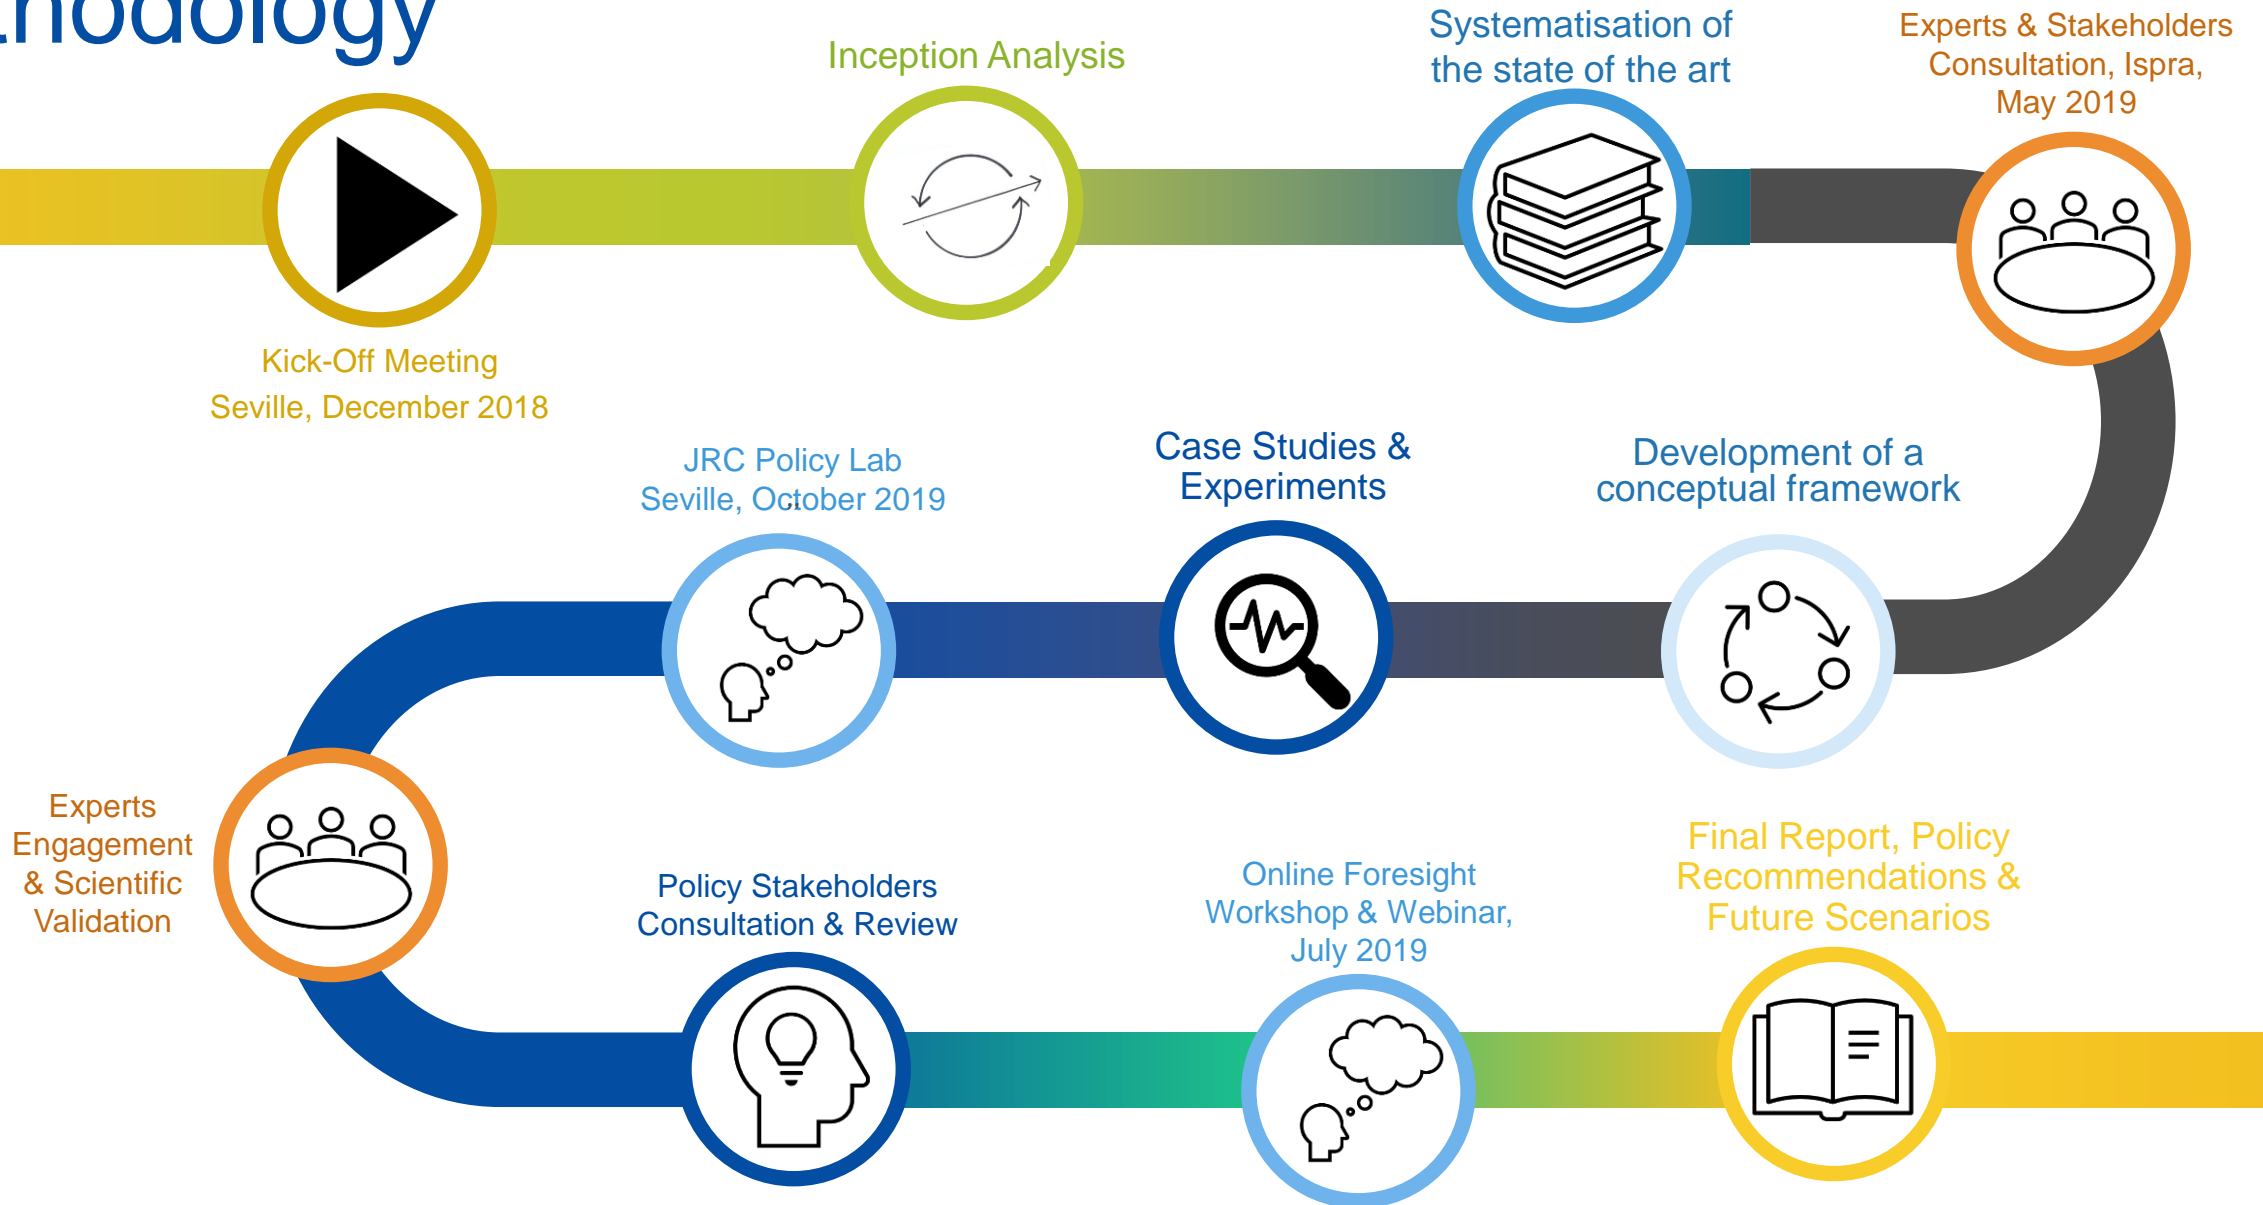

## Goal

- To explore in-depth the interplay between digital technology and other factors transforming government operations and policy-making in a data driven society

## Outcome

- Gain a better understanding of how innovation in the public sector, enabled by ICTs, can transform governance systems, in terms of new approaches to use data for policy design & service delivery, to better address systemic problems
- Develop a set of actionable research and policy recommendations to design and implement Digital Government Transformation in the EU beyond 2030

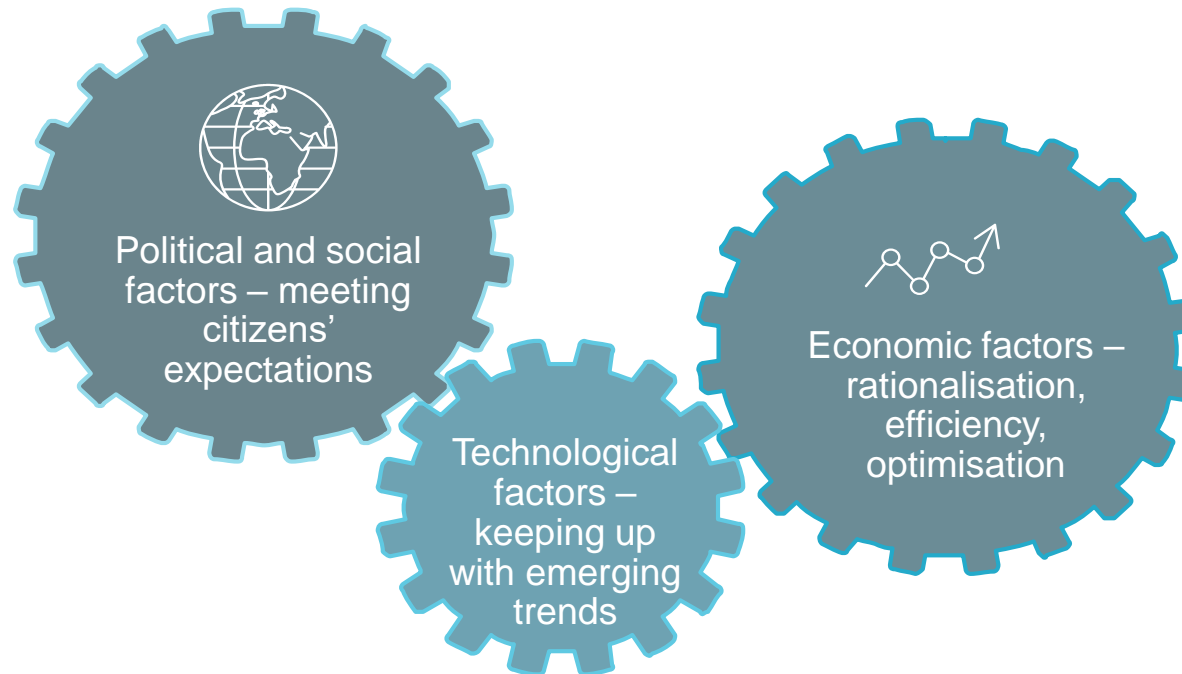

# Methodology\*

\*The DigiGov research has been conducted by the JRC Digital Economy Unit in Seville with scientific and technical support of the Consortium composed by PPMI, Open Evidence, Politecnico di Milano, RAND Europe and Martel Innovate

# In search of innovation between evidence and hope

- **Limited robust empirical evidence** on the effects of digital government transformation, especially on less measurable impacts such as **inclusion, legitimacy and participation**

<https://ec.europa.eu/jrc/en/publication/eur-scientific-and-technical-research-reports/exploring-digital-government-transformation-eu>

# Unveiling the path to Digital Government

## Evolution or revolution?

- From 'simple' to 'complex' forms of governing
- Different stages of readiness / levels of maturity
- Focus on service delivery & risk of 'mirroring effect'
- Techno-optimism & the trough of disillusionment

## Re-imagining government

### Governance & Service Transformation

- Digitization is only a part of it (often just the starting point)
- Permeating all aspects of governing and service delivering
- Complexity and multi-linearity of change
- Utopia & dystopia of digital innovation

# Assessing Digital Government transformation

- A conceptual framework for understanding how ICT-enabled innovation can transform government
- Empirical case studies & experiments to illustrate possible impacts of the digital transformation in different contexts and phases of the policy-cycle

JRC TECHNICAL REPORT

Assessing the impacts of digital government transformation in the EU

*Conceptual framework and empirical case studies*

Authors: Cristiano Codagnone, Giovanni Livni, Igiulio Baronevicius, Gianluca Moura, Luka Kitarović, Michele Baccetti, Ines Vazari, Giancarlo Vecchi, Emily Ryan Gibson, Katherine Stewart, Stjepan Roncevic, Sali Gurutwickar

Editor: Gianluca Moura

# Conceptualising Digital Government Transformation & public sector innovation

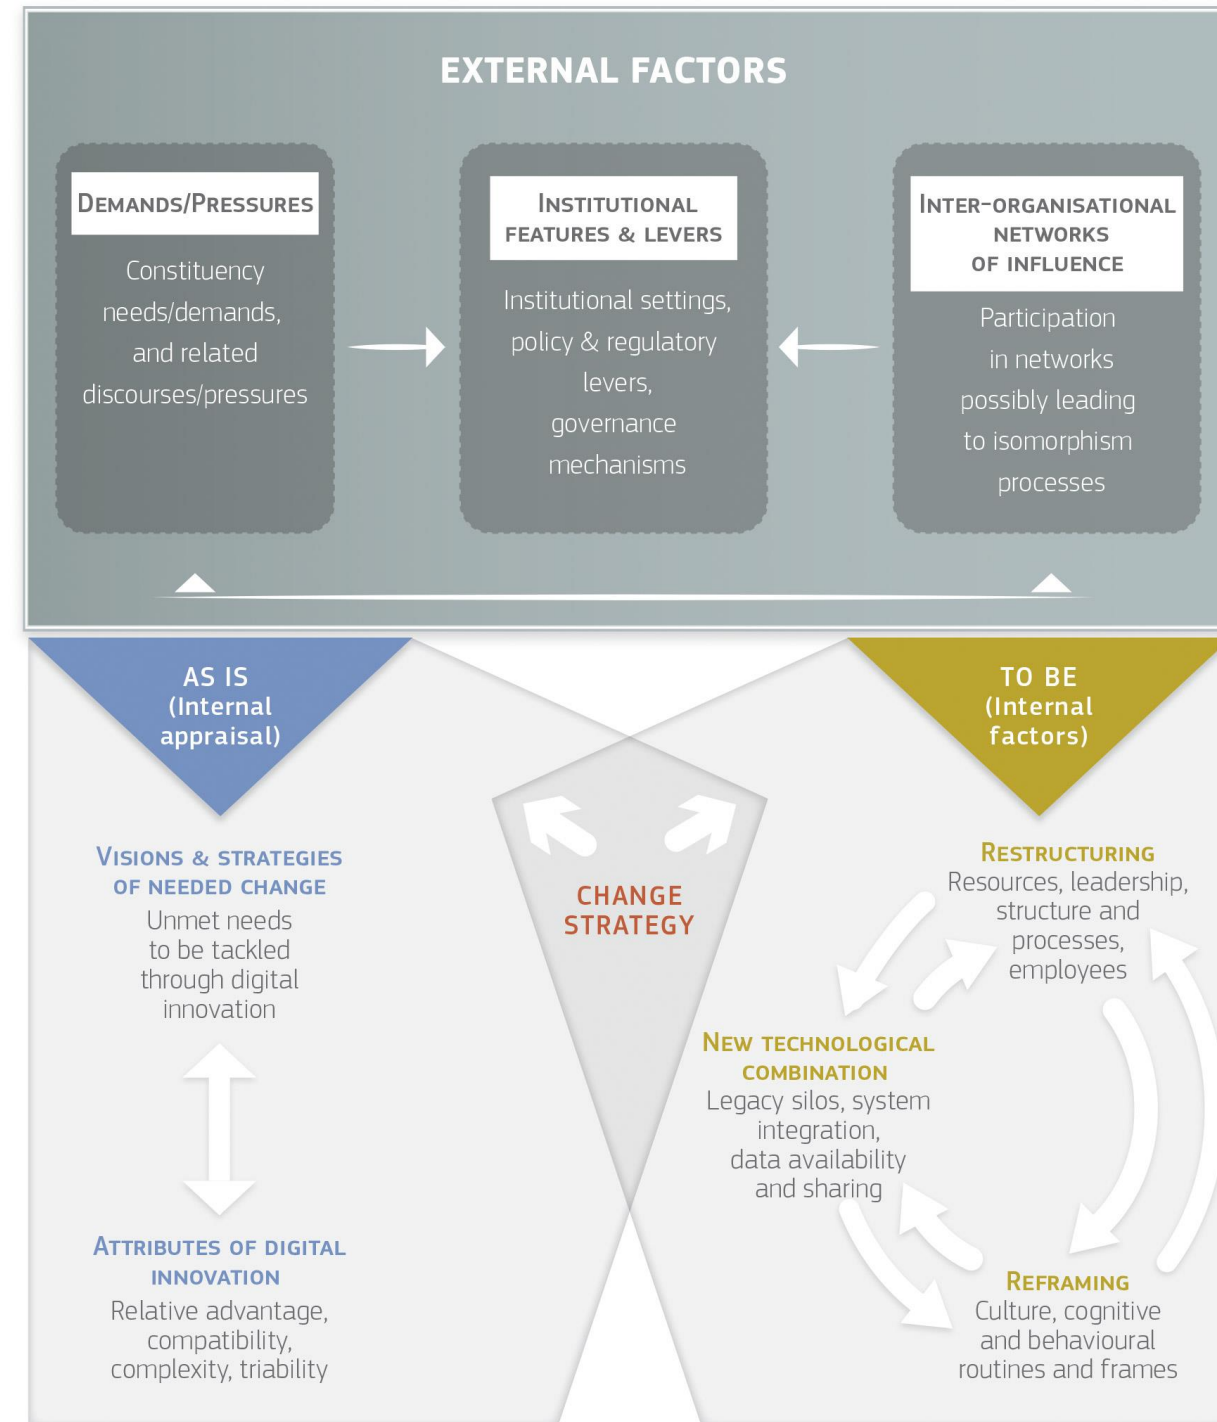

## The DigiGov Framework

Contribute to systematise and reconceptualise Digital Government Transformation within the scope of Public Sector Innovation in order to:

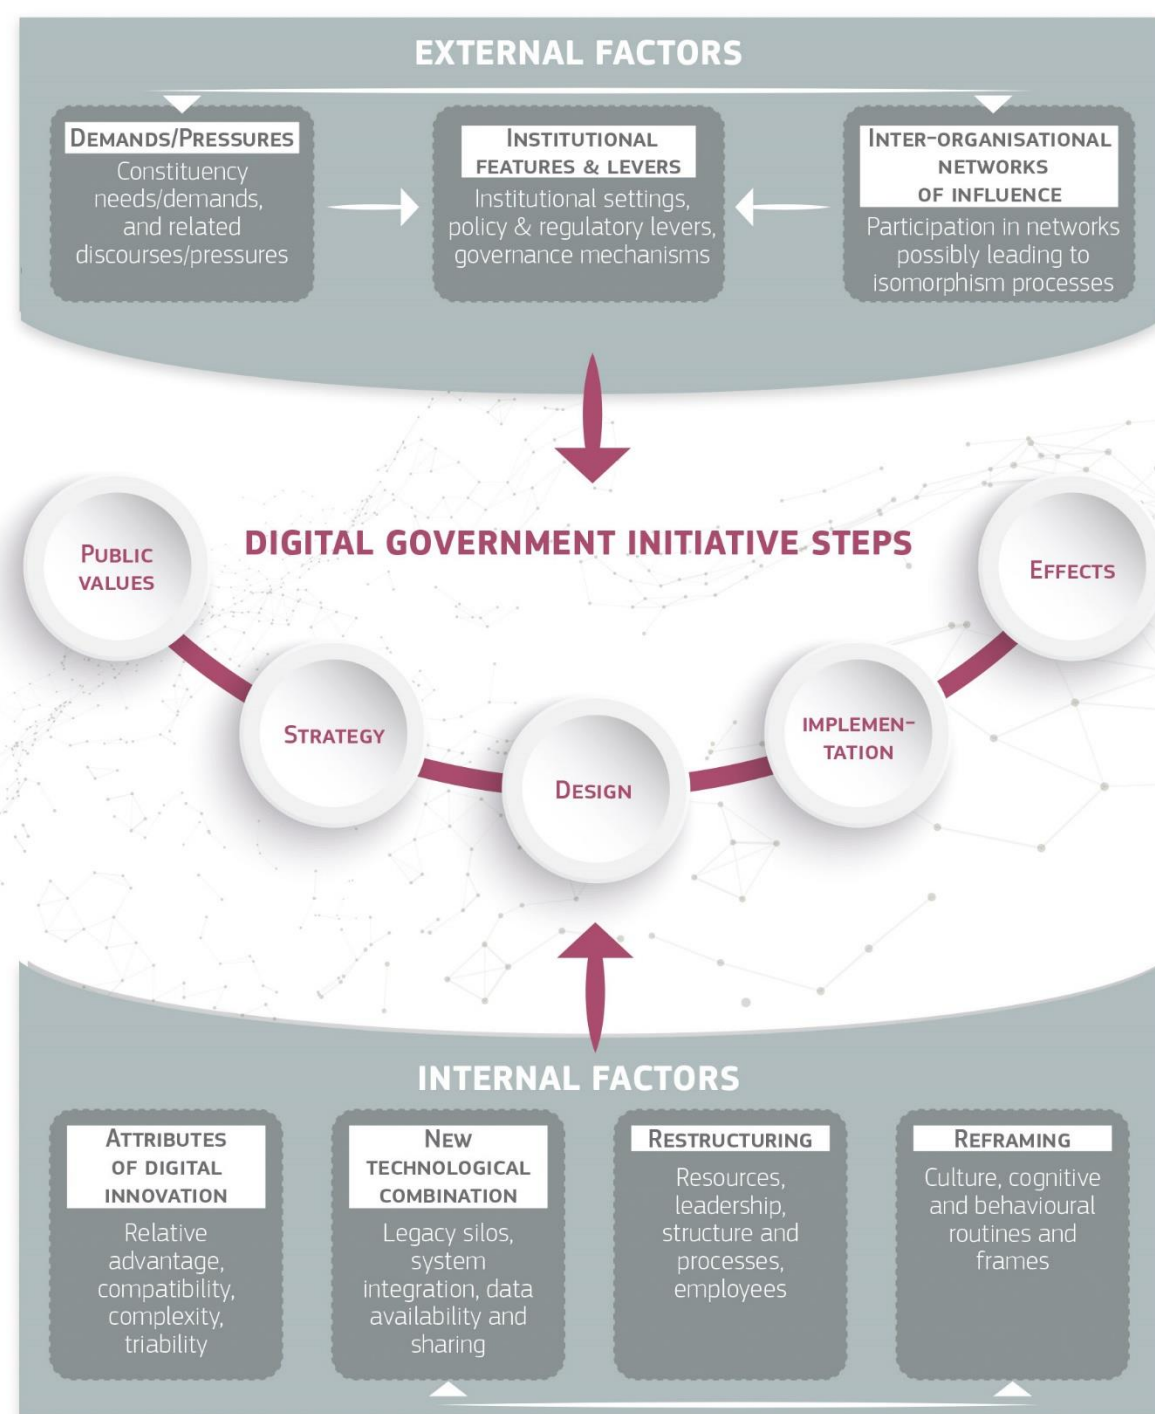

- 1) understand how ICT-enabled innovation can transform governance processes and policy-making mechanisms;
- 2) pave a way for a more in depth assessment of the effects of digital transformation; and
- 3) help generate hypotheses about implications that could be further explored empirically in future policy oriented research

# Innovation antecedents & change strategies

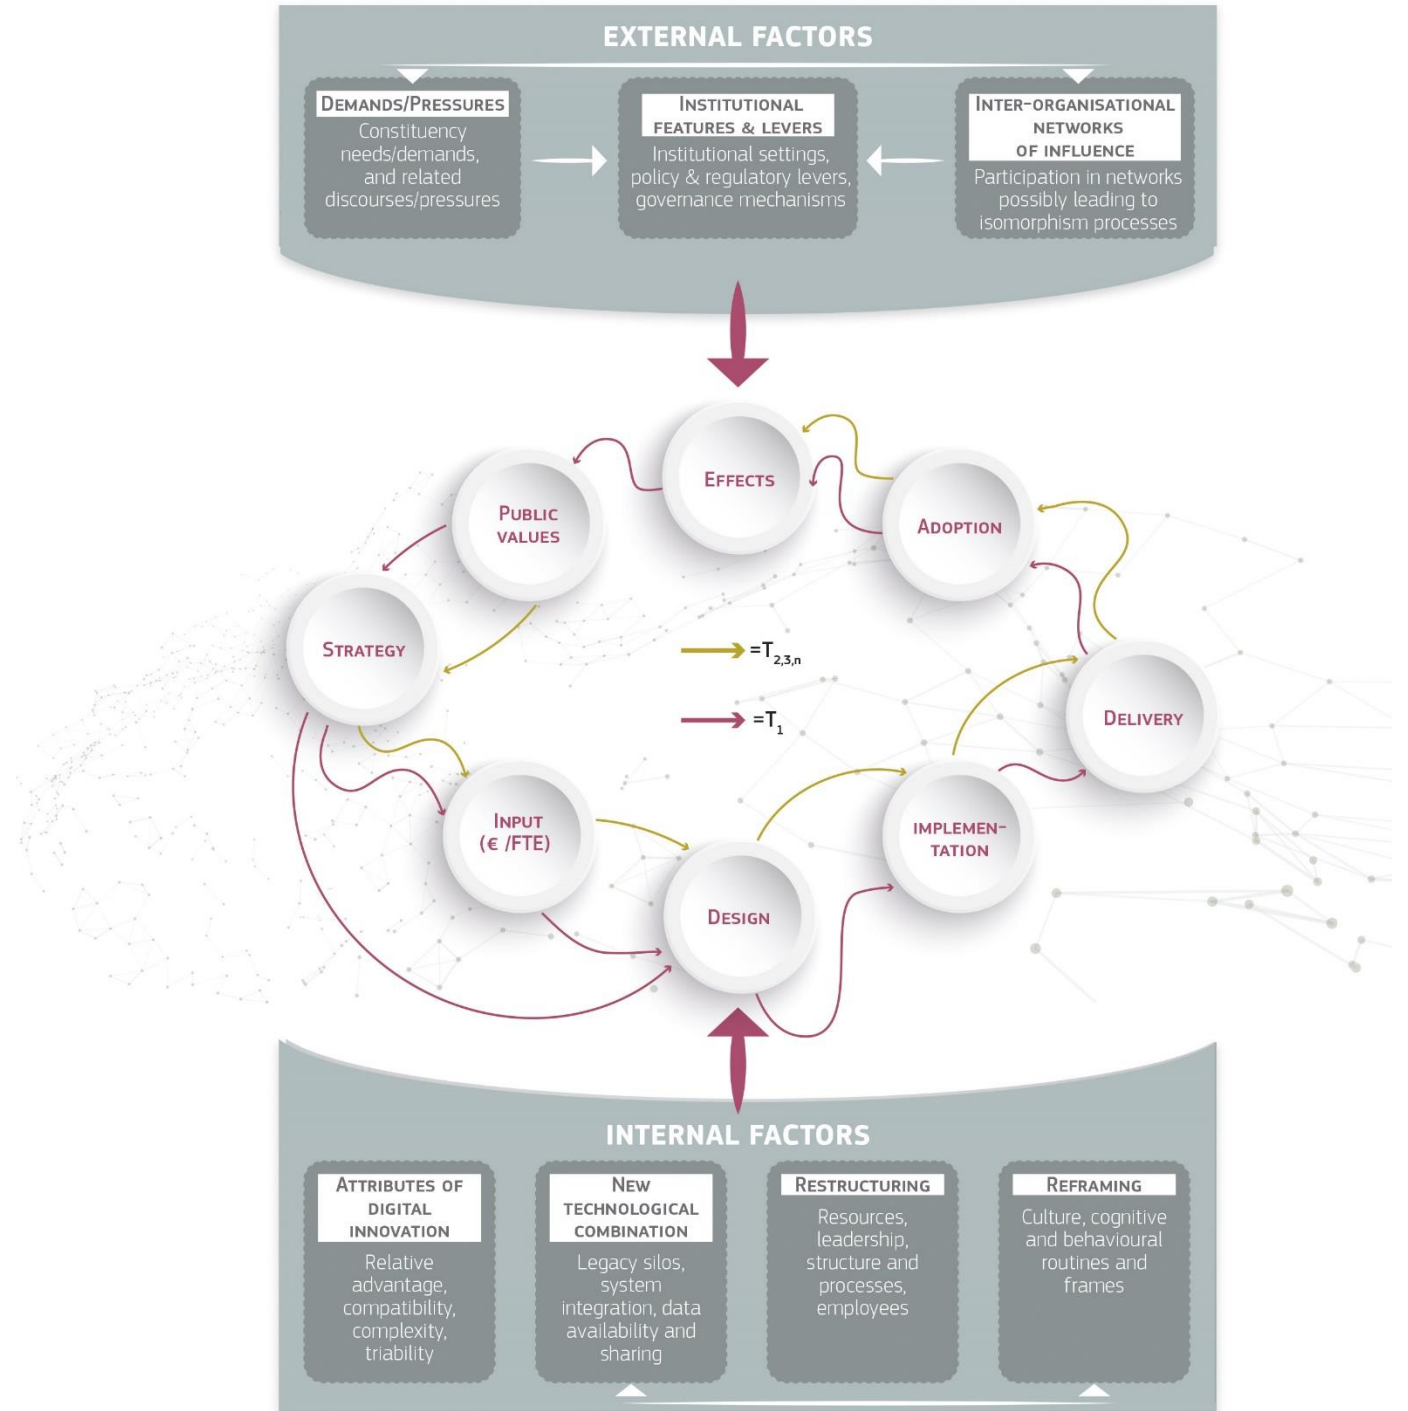

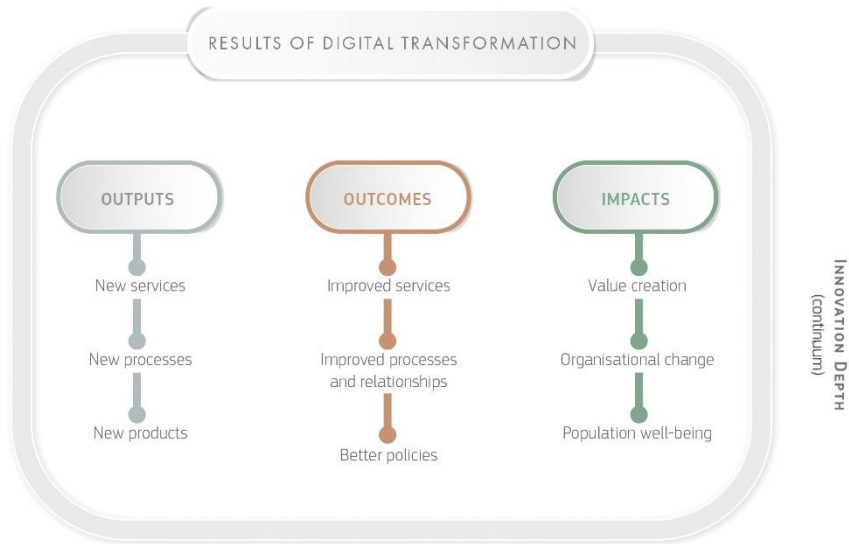

- The need to reframe public sector innovation to achieve Digital Government Transformation

# DigiGov F1.0

# DigiGov F2.0

# Building evidence through experimental case studies

- Tvarkau Vilnių, LT  
Citizens engagement

Notice: Notice various problems around the city, including garbage, parking violations, potholes, graffiti, etc.

Report: Report these issues to the municipality through the Tvarkau Vilnių app or web

See the results: Wait for the municipality to resolve your issue and see the result

- Body Worn cameras for policing in UK, NL & FI

- Sustainable behaviour & literacy in the city of Trento & Ferrara, IT

**KIDS GO GREEN**

- Privacy & trust in digital public services (DE & ES)

**Spain**

**Level of trust:**

- 19% in national government
- 36% in regional/local authorities
- 37% in public administration

**Germany**

**Level of trust:**

- 54% in national government
- 78% in regional/local authorities
- 71% in public administration

# Engaging with experts and stakeholders

- Scientific validation of findings through stakeholder engagement, expert consultation and peer review at international level

<https://publications.jrc.ec.europa.eu/repository/handle/JRC121494>

# Lessons learned: defining the framework conditions for innovating governance models and policy design

**Enable the technological conditions for data openness and sharing**, anticipating risks and possible negative consequences

**Manage the governance “with & of” ICTs** to unleash institutional re-design through social innovation and citizens engagement

**Harness data-powered intelligence** for evidence-based policy-making and better understanding the impact of ICTs on society...

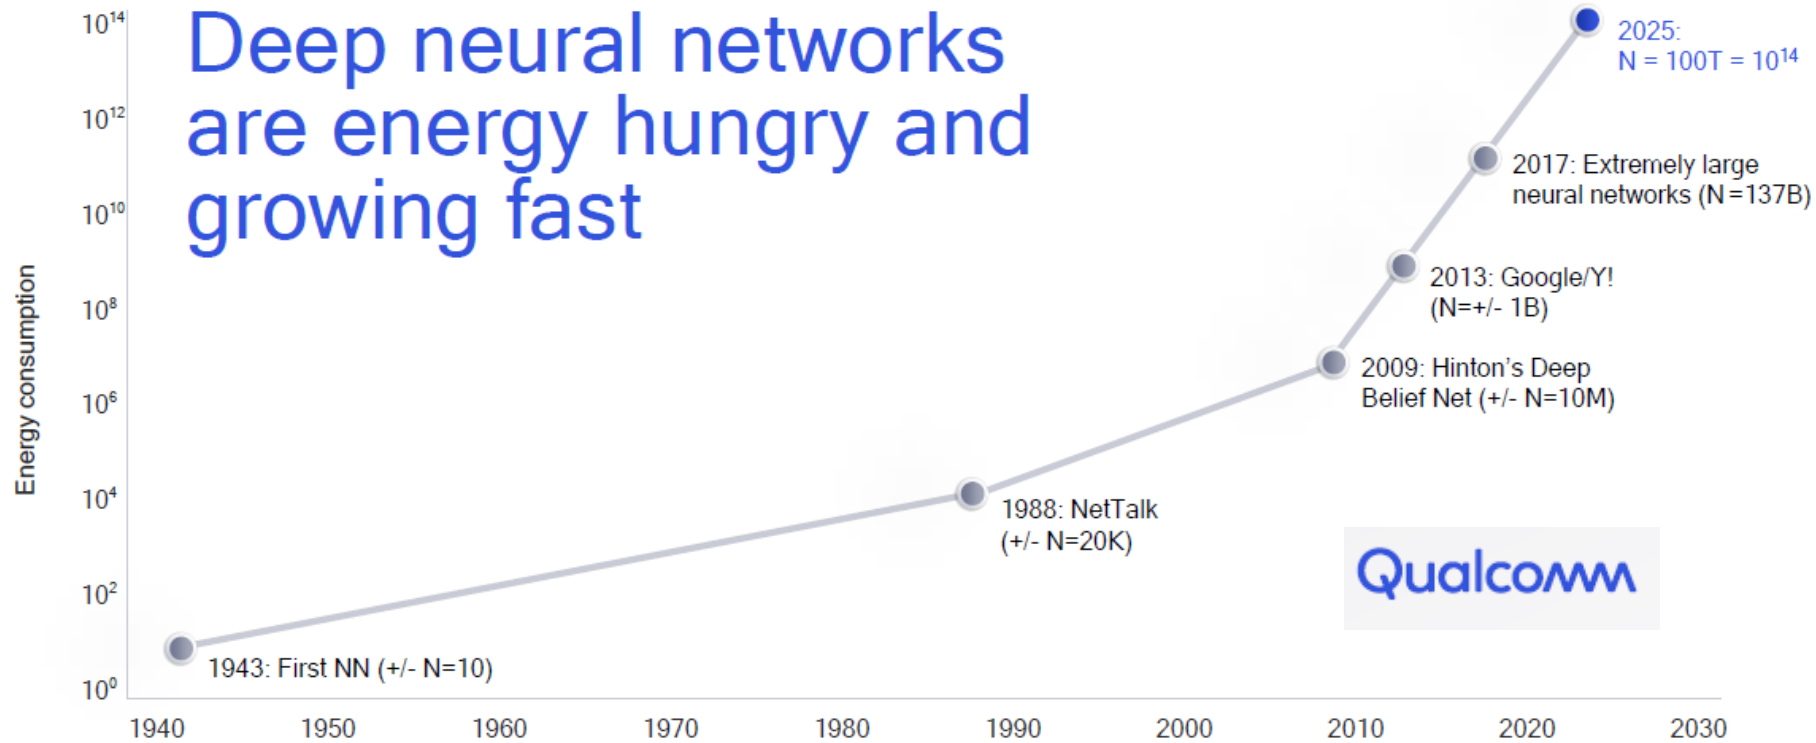

# Back to the future: Shaping Digital Europe 2040

# Back to the future... *again*

# “Super AI” will realise the singularity dream?

2025

Will we have reached the capacity of the human brain?  
Energy efficiency of a brain is 100,000x better than current hardware

# Are expectations coupled with socio-political trends?

- Increasing policy debate on the impact of technology on our societies
  - Rising power of tech giants
  - Regulation of the digital sphere
  - Algorithmic governance in a global landscape
- Two main dimensions of concern emerge:

The role of the state vis á vis the market: who will govern?

The level of individual data protection

# Shaping Digital Government Transformation 2040

## Online Foresight Workshop

**How to use this tool**

We are sending you this tool before Thursday's foresight workshop with a three fold aim:

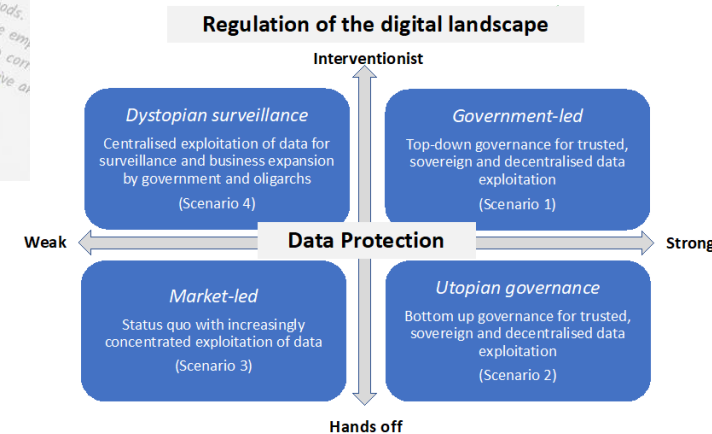

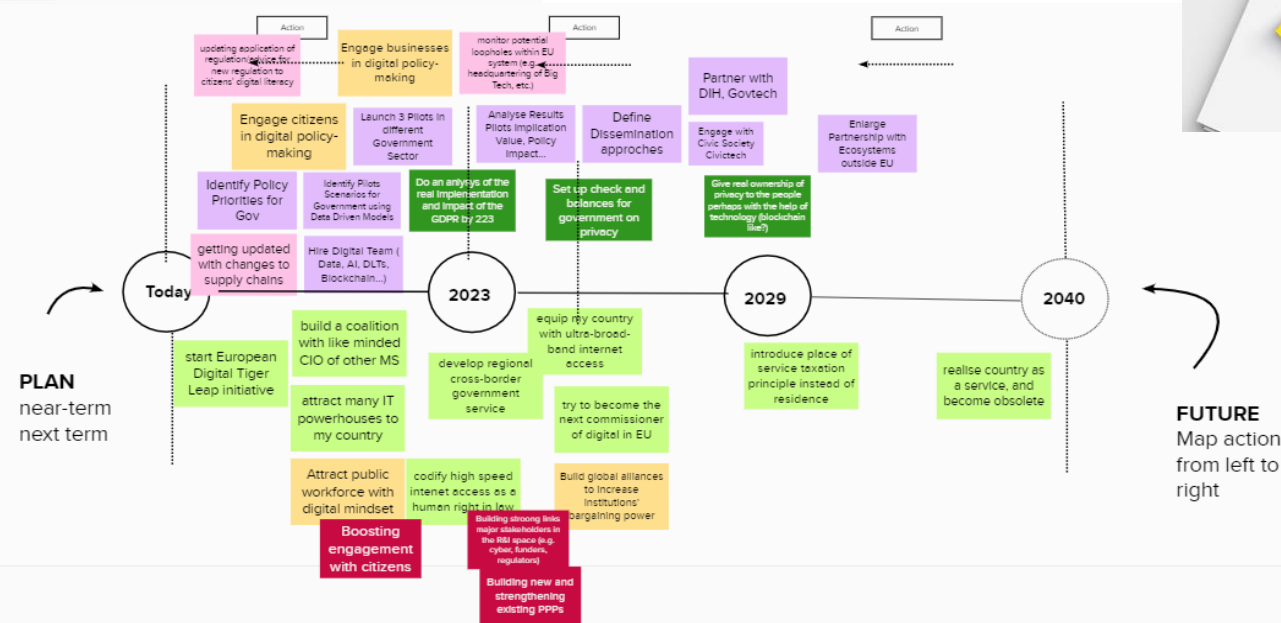

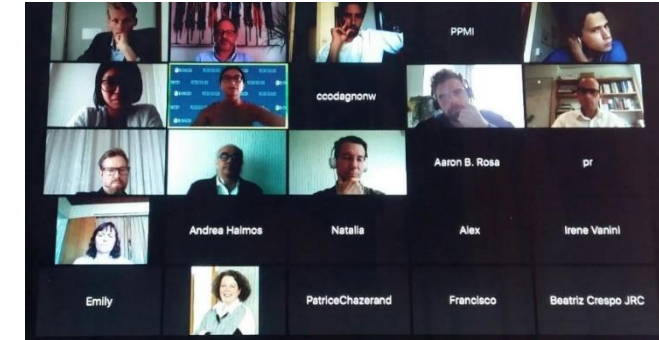

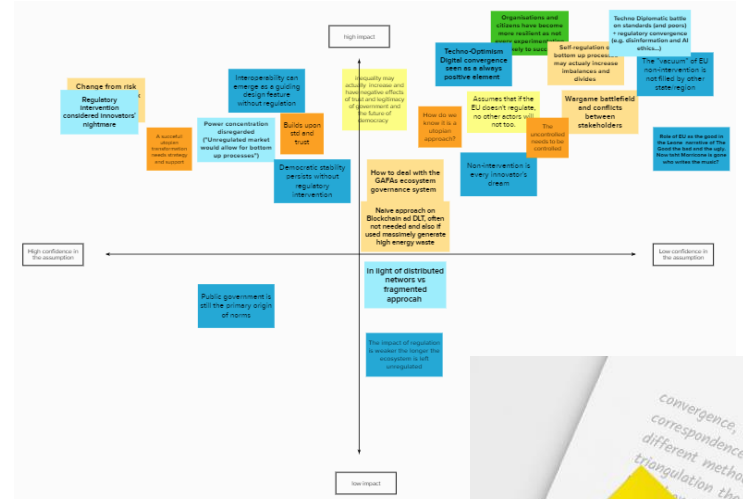

- Make a few minutes to read and analyse the foresight scenario you will be working on with a group of colleagues (Step 1)
- Take a few minutes to introduce yourself (during 2 activities your colleagues will be able to see you at each time. It is well as placing an image of your favourite design right under get familiar with. Mind the tool you are currently working on before the day of the workshop so you can make the most of our time together, Thursday the 9th.

**1 Private Sector Lead**

The task which is to be done in the workshop is to identify a business case for a new service or product. You will be working on a scenario for the next 10 years. You will be working on a scenario for the next 10 years. You will be working on a scenario for the next 10 years.

**2 Introduce yourself**

For you to be one of the people below I have a couple of minutes to be able to introduce myself through a collection of images that you will be creating a part of your business case.

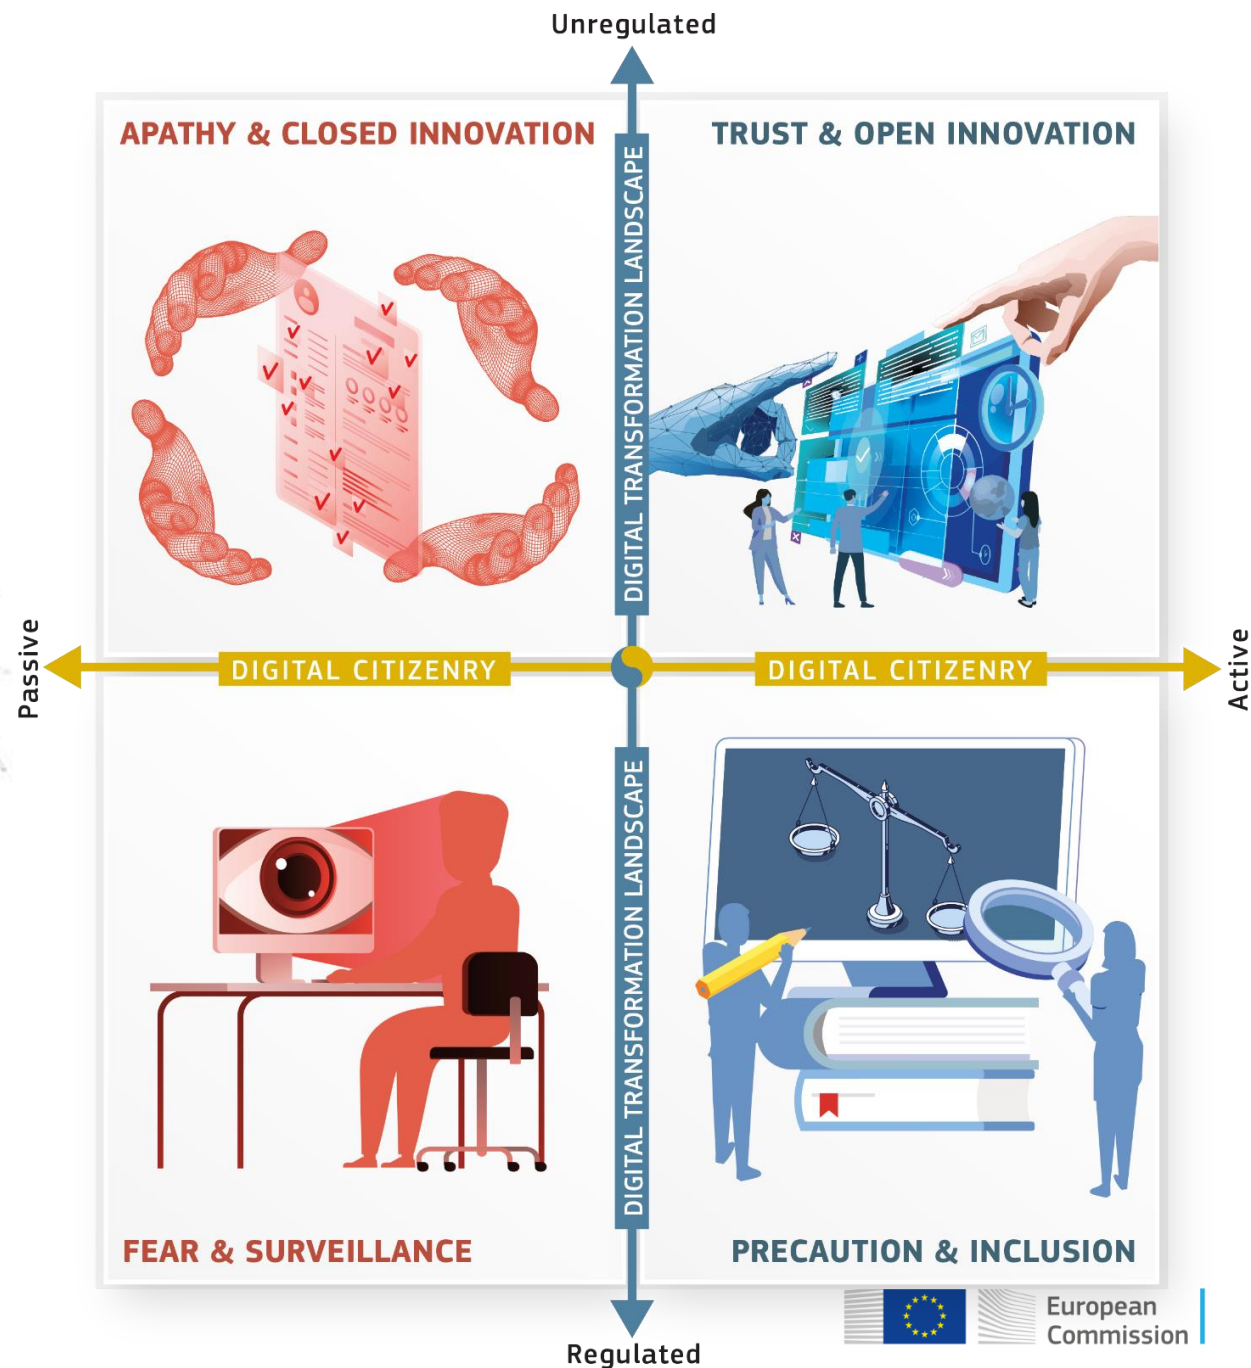

# Scenarios for Digital Government Transformation 2040

## Dimensions of Impact

Y. Digital Transformation landscape: Ranging from “regulated/interventionist” to “unregulated/hands off”

X. Digital Citizenry: Ranging from “passive” (no control to data subjects), to “active” (data ownership & digital sovereignty)

Passive

**APATHY & CLOSED INNOVATION**  
 A **passive and complacent digital citizenry** exchanges their rights as data subjects for the *status quo* access to free services, while a lack of regulation enables **quasi-monopolistic innovation** by incumbents, with an **increased digital divide**

DIGITAL CITIZENRY

**FEAR & SURVEILLANCE**

A **passive and fearful digital citizenry** exchanges **security for surveillance** and strict regulation, with **weak protection of data**, which are exploited by government and big business, producing **digital exclusion**

DIGITAL TRANSFORMATION LANDSCAPE

**TRUST & OPEN INNOVATION**  
 An **active digital citizenry**, with functioning infrastructures and empowered data subjects, **joins with innovators to build bottom-up governance** for trusted, sovereign, decentralised data exploitation and **human-centric digital services**

DIGITAL CITIZENRY

**PRECAUTION & INCLUSION**

**Firm regulation**, balanced by an **active digital citizenry**, results in a **less innovative but more inclusive digital transformation** with sovereign and decentralised data exploitation

DIGITAL TRANSFORMATION LANDSCAPE

Active

*A Scenario is a possible world...  
a world that does not have to be, but  
may yet come to pass...*

# Policy implications & future research

# Main findings

1. There are limits of automation and of immediate productivity
2. Importance of investments to keep service up and running
3. Reframing of organisational processes crucial to move beyond pilots
4. Strategic importance and twofold nature of legitimacy and trust
5. Greater focus is needed on adoption, considering the digital divide
6. Realism about engagement, open governance and co-production
7. Importance of non-monetary effects and embracing complexity

# Policy implications

1. Governing the tension between platformisation and distributed networks
2. Enforcing new 'modes of regulation' for enabling 'e-Government 4.0'
3. Developing ethical framework to minimise the risks of new technologies
4. Opening access to data, while protecting privacy and promoting interoperability
5. Building capacities to exploit predictive analytics and cognitive technologies
6. Creating a digital transformation culture within the public administration
7. Prioritising public value and aligning governance systems with SDGs

# Future research

- Further empirical application of the conceptual framework for in-depth analysis of public sector innovation practices to promote their “scaling-deep/up and out”
- Exploratory analysis of the potential of Data spaces, Innovative Public Procurement and GovTech to stimulate adoption of innovation in public services and policy-design
- Studying the collateral positive effects of COVID-19 and their potential to speed up the needed “reframing” for digital government transformation
- Exploring the potential for public value creation at local and regional level through a systematic review of innovative public services and their digital local ecosystems
- Assessing the impact of specific technologies (e.g. AI, Big Data, IoT) gathering evidence to support existing efforts, such as the AI Watch and IPSO, or new ones like the Platform for regions, to increase policy coherence in the EU Digital Governance

# What's next ?

COMING SOON

## Shaping Digital Government transformation 2040

### Headlines

- About 360 million European adults (82%) consider that their governments should take measures to reduce income inequality.
- Public demand for government action is proportionate to the actual level of income equality in a country.
- The greater the income gap between the middle class and the rich, the more support there is for redistributive policies.
- Individuals who believe that society is basically meritocratic and that everyone enjoys equal opportunities are less likely to support redistributive policies.

### Policy context

There is growing consensus that, beyond a certain level, income inequality can have both economic and social costs. It can hamper economic growth and undermine social cohesion. The European Union, through the European Pillar of Social Rights, has put equality and fairness at the heart of its policy objectives.

Data show that the majority of Europe would favour a more equitable distribution of income. However, the nature of the link between income inequality and support for redistribution is unclear. Theoretical reasoning would suggest that when income inequality is high, the majority support state intervention in favour of redistribution. However, empirical analysis usually does not corroborate this theory, for various possible reasons. First, people's conceptions and therefore (mis)perceptions of inequality vary; second, attitudes towards income redistribution may also reflect subjective views about what fairness in society means; and third, socio-demographic characteristics

play an important role.

Using new data on income inequality and the special Eurobarometer on 'Fairness, inequality and intergenerational mobility', research at the JRC is helping to shed light on the drivers of support for income redistribution.

### Digital Government scenarios

For the purposes of this brief, support for redistribution is expressed through the rate of agreement with the statement 'The government should take measures to reduce differences in income'.

Figure 1 shows that redistribution received a high degree of support (82% on average) across the European Union: 39% agreed, and 43% even strongly agreed, that government should intervene to reduce income inequality. There are, however, disparities across regions and countries.

Figure 1. Support for redistribution

\*This brief is based on the JRC report 'The Median Voter Takes it All: Preferences for Redistribution and Income Inequality in the EU-20', Marco Colagrosso, Stylianos Karagiannis and Roman Raab, JRC Working Papers in Economics and Finance, forthcoming.
