

DCAT-AP_IT The Italian extension of DCAT-AP

Giorgia Lodi, Antonio Rotundo, Gabriele Ciasullo "Agenzia per l'Italia Digitale"

Italy

Characteristics of the profile

PRINCIPAL EXTENSIONS

- Frequency is mandatory in DCAT-AP_IT
- Contact Point using vcard:Organization class
 - After the public consultation we replaced
 vcard:organizationName with vcard:fn as indicated in [1]
 - The other properties we introduced are fully compliant with [1]
- We added some properties for managing roles of an Agent
 - Rights Holder → dct:rightsHolder (mandatory)
 - Creator → dct: creator (optional)
- We extended the class Standard in order to also model legislation references
- **License** is mandatory. We also extended it with further properties that can be used in case of proprietary licenses

Main encountered issue

LICENSE MANAGEMENT

Issue. dct:type is expressed using a controlled vocabulary which is difficult to apply, also in the open data context

Example. Apparently, there is no option for attribution-share alike which is widely used in open data (e.g., CC-BY-SA)

- Necessary to select two different type items of the recommended ADMS vocabulary
- However, in DCAT-AP the cardinality of dct:type is
 0..1

Currently preliminary solution

 We defined a classification that is however based on the recommended vocabulary ADMS License type

- The classification has a first level that consists of three main items
 - Open data licenses
 - Non open data licenses
 - Unknown

Currently preliminary solution

- We mapped the current items of ADMS vocabulary to the previous identified first level
- Since in DCAT-AP_IT we recommend CC licenses, we mapped all the CC licenses to ADMS license types
 - In the case of "attribution-share alike" we attributed it to "effect viral (alias share-alike)" ADMS license type. Is it correct??
- When a license different from a CC license is to be specified, the classification allows a user to select "other"
 - The other properties we added to the class
 LicenseDocument in DCAT-AP_IT can be specified

Currently preliminary solution
