

Good practice No 10

All base registries have data management in place.

In the absence of interconnection, several base registries will hold the same data and create unnecessary duplication. This fragmentation generates inconsistencies, uncertainty as to which information is the most recent, and also breaches the principle of once-only registration in the EU public sector information directive. In addition, it is an administrative burden on citizens and public administrations. Robust data management processes and policies are critical for reliable sources of information.

- **MEMBER STATES INITIATIVE:** DENMARK (GRUNDDATA)

DENMARK - GRUNDDATA.

Danish public administrations responsible for land base registries have started to eliminate data duplication by identifying base registries' unique owners and through master data governance.
