[EU40] The National Open Data Portals

The National Open Data Portals	
Summary	
ID	EU40
Initiative	European Commission
Short description	The European Commission activity in this area includes: - Developing an open data portal site for any type of information held by the Commission and other EU institutions and bodies. - Developing a pan-European digital service infrastructure for open data with a view of providing multi-lingual access to data published by public administrations at all levels of government in Europe (EU countries, countries of the European Economic Area and certain other European countries). - Working with EU Member States on data formats and interoperability between existing open data portal sites at State, regional or local level. The Commission wants to increase public access to high-value, machine-readable data sets generated by European, national & regional governments and public administrations. - Contracting services to support data holding entities wishing to publish data on an open data portal, providing technical assistance on data preparation, transformation and publication and related training and IT advisory services. Online training material can be found here. And two other initiatives are helpful to identify and reuse public information: - DataPortals.org is the most comprehensive list of open data portals in the world. It is curated by a group of leading open data experts from around the world - including representatives from local, regional and national governments, international organisations such as the World Bank, and numerous NGOs. - PublicData.eu is a Pan European data portal, providing access to open, freely reusable datasets from local, regional and national public bodies across Europe.
