Political Communications

At the end of 2022, GovTech Lab published a report entitled 'Analysis of the GovTech Challenge Series. The Experience of 50+ Organisations while Developing Digital Innovation'. The report highlights the experience of organisations that participated in five cycles of the 'GovTech Challenge Series', describing the results achieved, the main challenges encountered as well as the preconditions needed for successful implementation

Legislations

In July 2022, amendments to the Law on Official Statistics and State Data Governance were adopted. They establish a new approach to the management of State data and the regulation of their processing, reduce the administrative burden on data-providing institutions, and ensure more flexible use of collected data.
In the same month, the Lithuanian government amended the Law on the Prevention of Money Laundering and Terrorist Financing with the objective of ensuring increased transparency, while fostering the further development of the national cryptocurrency sector.

Infrastructures

JANGIS is a newly created subsystem of JADIS, in operation since the beginning of 2022, which collects data about beneficial owners. The Law on the Prevention of Money Laundering and Terrorist Financing mandates all legal entities based in Lithuania (except for legal entities whose sole member is the State or a municipality), including collective investment undertakings, to obtain, update and store accurate information on their beneficial owners.

Governance

No recent changes in governance have been reported to date.
