Visit the e-Government factsheets online on Joinup.eu

Joinup is a collaborative platform created by the European Commission under the ISA programme. ISA supports the modernization of Public administrations in Europe through the development of interoperable services, frameworks and tools. Joinup provides numerous services around 3 main functionalities:
1. An observatory on interoperability, e-government, e-inclusion and e-health
2. A collaborative platform of open communities
3. A repository of interoperability solutions

This document is meant to present an overview of the eGoverment status in this country and not to be exhaustive in its references and analysis. Even though every possible care has been taken by the authors to refer to and use valid data from authentic sources, the European Commission does not guarantee the accuracy of the included information, nor does it accept any responsibility for any use thereof.

Profile
Basic data and indicators

Basic Data

Population (1 000): 508,450,856 inhabitants (2015)
GDP at market prices: 14,625,372.9 million EUR (2015)
GDP growth rate: 1.9% (2015)
Inflation rate: 0.0% (2015)
Unemployment rate: 9.4% (2015)
General government gross debt (Percentage of GDP): 85.2% (2015)
General government deficit/surplus (Percentage of GDP): -2.4% (2015)
Area: 4,306,585 km²

eGovernment State of Play

The graph below is the result of the latest eGovernment Benchmark study, which monitors the development of eGovernment in Europe, based on specific indicators. These indicators are clustered within four main top-level benchmarks:

- **User Centricity** – indicates to what extent (information about) a service is provided online and how this is perceived.

- **Transparent Government** – indicates to what extent governments are transparent regarding: i) their own responsibilities and performance, ii) the process of service delivery and iii) personal data involved.

- **Cross Border Mobility** – indicates to what extent EU citizens can use online services in another country.

- **Key Enablers** – indicates the extent to which 5 technical pre-conditions are available online. There are: Electronic Identification (eID), Electronic documents (eDocuments), Authentic Sources, Electronic Safe (eSafe), and Single Sign On (SSO).

These top-level benchmarks are measured using a life-events (e.g. mystery shopping) approach. The following life-events were used for measuring the eGovernment Benchmark top-level indicators: Business start-up and early trading operations, Losing and Finding a Job, Studying, Regular business operations, Moving, Owning and driving a car, and Starting a small claims procedure. The figure below presents the development of eGovernment in the EU.

---

1 The latest version of benchmark report was published in June 2015, however it shall be noted that it summarizes the biennial score of the preceding year (2014).
Information Strategy, Information Society and eGovernment in the European Union

Main strategic directions, funding mechanisms and achievements / Main strategic objectives and principles

A Two-Tier Approach towards Modern Administrations

The European Commission follows a two-tier approach. At a political level, the Europe 2020 economic strategy and the Digital Agenda for Europe flagship initiative aim to deliver sustainable economic and social benefits from a Digital Single Market based on fast and ultra-fast Internet and interoperable applications.

Europe 2020 - a strategy for smart, sustainable and inclusive growth

On 17 June 2010, the European Council adopted the ‘Europe 2020 - A strategy for smart, sustainable and inclusive growth’ economic strategy. Europe 2020 sets out a vision for Europe’s social market economy over the next decade, and rests on three interlocking and mutually reinforcing priority areas: smart Growth, developing an economy based on knowledge and innovation; sustainable Growth, promoting a low-carbon, resource-efficient and competitive economy; and inclusive Growth, fostering a high-employment economy delivering social and territorial cohesion.

The areas of attention of Europe 2020 will be addressed by 7 flagship initiatives at EU, national, local and regional levels. Within each initiative, both the EU and national authorities will have to coordinate their efforts so as to be mutually reinforcing. Within the framework of actions contributing to the Smart Growth priority area, the Digital Agenda for Europe constitutes a flagship initiative for recovering from the financial and economic crisis, and for lifting up the EU economy in the next decade by making the best use of Information and Communication Technologies (ICT). More information can be viewed at the Europe 2020 website.

Digital Agenda for Europe

The Digital Agenda for Europe was proposed on 5 May 2010 by the European Commission and was endorsed on 31 May 2010 at the Transport, Telecommunications and Energy meeting of the Council of the European Union. Being the first flagship initiative within the framework of the Europe 2020 economic strategy, this ambitious action plan is aimed at delivering sustainable economic and social benefits from a Digital Single Market, based on fast and ultra-fast Internet and interoperable applications. To this end, the agenda outlines seven priority area:

- **Pillar I: Digital Single Market** - The Digital Agenda will update EU Single Market rules for the digital era. The aims are to boost the music download business, establish a single area for online payments, and further protect EU consumers in cyberspace. This will be enabled through the following actions:
  - Member States to implement laws to support the digital single market; and
  - Member States to transpose the VAT Directive.
- **Pillar II: Interoperability and Standards** - Europe must ensure that new IT devices, applications, data repositories and services interact seamlessly anywhere – just like the internet. The Digital Agenda identifies improved standard-setting procedures and
increased interoperability as the keys to success. This will be enabled through the following actions:

- Member States to implement European Interoperability Framework; and
- Member States to implement (commitments on interoperability and standards in) the Malmö and Granada declarations.

**Pillar III: Trust and Security** - The Digital Agenda proposes a number of practical solutions, including a coordinated European response to cyber-attacks and reinforced rules on personal data protection. This will be enabled through the following actions:

- Member States to establish pan-European Computer Emergency Response Teams;
- Member States to carry out cyber-attack simulations;
- Member States to implement harmful content alert hotlines; and
- Member States to set up national alert platforms.

**Pillar IV: Very fast internet** - Europe needs download rates of 30 Mbps for all of its citizens and at least 50% of European households subscribing to internet connections above 100 Mbps by 2020. The Digital Agenda aims to turn this ambition into reality by stimulating investments and proposing a comprehensive radio. This will be enabled through the following actions:

- Member States to develop national broadband plans;
- Member States to facilitate broadband investment;
- Use structural funds to finance the roll-out of high-speed networks; and
- Member States to implement European Spectrum Policy Programme (ESPP).

**Pillar V: Research and Innovation** - The Digital Agenda seeks to maintain Europe's competitive edge through increased coordination and elimination of Europe's fragmented efforts. This will be enabled through the following actions:

- Member States to double annual public spending on ICT research and development; and
- Member States to engage in large-scale pilots financed by the Competitiveness and Innovation Programme.

**Pillar VI: Enhancing e-Skills** - As ever more daily tasks are carried out online, all our people need enhanced digital skills to participate fully in society. The Digital Agenda tackles this unacceptable digital divide. This will be enabled through the following actions:

- Member States to promote long-term e-skills and digital literacy policies;
- Member states to implement provisions on disability in Telecoms Framework and AVMS; and
- Member States to mainstream eLearning in national policies.

**Pillar VII: ICT for Social Challenges** - The Digital Agenda focuses on ICTs capability to reduce energy consumption, support ageing citizens' lives, revolutionises health services and deliver better public services. ICTs can also drive forward the digitisation of Europe's cultural heritage providing online access for all. This will be enabled through the following actions:

- Member States to agree on common additional functionalities for smart meters;
- Member States to include specifications for total lifetime costs for public lighting in public procurement;
• Member States to make eGovernment services fully interoperable;
• Member States to ensure that Points of Single Contact function as fully fledged eGovernment centres;
• Member States to agree a common list of key cross-border public services; and
• Member States to fulfil obligations under European Rail Traffic Management System (ERTMS).

Further information and relevant publications can be viewed at the Digital Agenda's website.

Main Strategies

Digital Single Market Strategy for Europe

On 6 May 2015, the European Commission unveiled its detailed plans to create a Digital Single Market (official website), thereby delivering on one of its top priorities.

The Digital Single Market Strategy has benefitted from input and dialogue with Member States, the European Parliament and stakeholders. It has a multi-annual scope and is focused on key interdependent actions that can only be taken at EU level. They have been chosen to have maximum impact, can be delivered during this Commission's mandate, and will be taken forward in line with Better Regulation principles. Each will be subject to appropriate consultation and impact assessment. The Digital Single Market Strategy will be built on three pillars:

› **Better access for consumers and businesses to online goods and services across Europe** – this requires the rapid removal of key differences between the online and offline worlds to break down barriers to cross-border online activity.

› **Creating the right conditions for digital networks and services to flourish** – this requires high-speed, secure and trustworthy infrastructures and content services, supported by the right regulatory conditions for investment, fair competition and a level playing field.

› **Maximising the growth potential of our European Digital Economy** – this requires investment in ICT infrastructures and technologies such as Cloud computing and Big Data, and research and innovation to boost industrial competitiveness as well as better public services, inclusiveness and skills.

The third priority, ‘Maximising the growth potential of our European Digital Economy’, is in particular relevance for the area of eGovernment, including the following actions for the Commission:

› **Proposing** a 'European free flow of data initiative' to promote the free movement of data in the European Union and launching a European Cloud initiative covering certification of cloud services, the switching of cloud service providers and a "research cloud".

› **Revising** and extending the European Interoperability Framework.

› **Supporting** an inclusive digital society where citizens have the right skills to seize the opportunities of the Internet and presenting a new eGovernment Action Plan (see below) that for the period of 2016 – 2020 aims to (i) modernise public administration, (ii) achieve the digital internal market; and (iii) engage more with citizens and businesses to deliver high quality services.
The European eGovernment Action Plan 2016 – 2020 aims to be the instrument to join up efforts. While Member States pursue their own strategies and activities, the current Action Plan – based on a shared long-term vision - sets out a number of principles that forthcoming initiatives should observe in order to deliver significant benefits that eGovernment can bring to businesses, citizens and public administrations themselves.

The Action Plan provides for a dynamic and flexible approach, to keep track of the fast changing environment. Beyond the actions identified in the Action Plan, further actions may be proposed either by the Commission or by stakeholders, including Member States. This will be facilitated by an online stakeholder engagement platform which will be launched in June 2016.

The Action Plan already identifies 20 concrete actions to accelerate the implementation of existing legislation and the related take up of online public services, under the following policy priorities:

- **Modernise public administration with ICT, using key digital enablers**
  
  Public administrations need to transform their back offices, to rethink and redesign existing procedures and services, and open their data and services to other administrations, and, as far as possible, to businesses and civil society. Digital public services should build on shared and reusable solutions and services based on agreed standards and technical specifications in order to reduce their cost of development, their time to deployment and increase interoperability.

- **Enabling cross-border mobility with interoperable digital public services**
  
  Cross-border digital public services facilitate access to markets, increase confidence in and stimulate competition across the Single Market. Administrations should help businesses operate online across borders within the Single Market, simplify access to information under EU business and company laws and enable businesses to easily start doing business, expand and operate in other Member States through end-to-end public e-services.

- **Facilitating digital interaction between administrations and citizens/businesses for high-quality public services**
  
  The new digital environment offers opportunities to facilitate the interaction of citizens, business and non-governmental organisations with public administrations. There is a promising potential to deliver such high quality public services, by stepping up the involvement of businesses and citizens as well as researchers in their design and delivery, and by ensuring feedback for improvement where necessary. This leads to further reducing red tape, easing use, lowering delivery costs.

---

4 Contribute to the eGovernment Action Plan 2016 – 2020, FUTURIUM, an online platform gathering ideas for new actions and providing space for all to collaborate and discuss on how to improve eGovernment services in the EU, available at: https://ec.europa.eu/futurium/en/egovernment4eu.
Open Government

This eGovernment Action Plan is guided by the vision to make the public administrations and public institutions in the European Union open, efficient and inclusive, providing borderless, personalised, user-friendly, end-to-end digital public services to all citizens and businesses in the EU by 2020.

The open government approach can facilitate this transformation that is driven by opening up public data and services and facilitating collaboration for the design, production and delivery of public service. This requires optimising process flows, opening up public sector data and services and moving from a silo mentality to a coordinated and collaborative approach. Open Government is based on the principles of collaboration, transparency and participation; functioning within an open governance framework. It is also about making government processes and decisions open, in order to foster citizen participation and engagement.

Breaking the internal silos between administrations, by opening up data and services between administrative departments can reduce cost and avoid duplication. Breaking the silos between public administrations across borders, by opening the data and services will increase their efficiency and facilitate the cross-border mobility of businesses and citizens.

Breaking the silos with stakeholders and eventually opening public sector data and services to third parties, in full compliance with the legal framework for the protection of personal data and for privacy, will allow them to reuse these data for designing targeted - personalised, pro-active and location-based - services, thus facilitating digital interaction between administrations and users.

Furthermore, by opening up to and engaging with stakeholders in decision-making, public administrations will become more trustworthy and more accountable.

An open government will support ICT-enabled public sector innovation; improving the efficiency, effectiveness and quality of public services by introducing new processes, products, services and methods of delivery enabled by ICT.

Based on this experience and during the preparation of the new eGovernment Action Plan, discussions around a paradigm shift towards open, collaborative and innovative government have continued and a paper on the 'Vision for Public Services' was published. Vision for Public Services outlines the long-term vision for a modern and open public sector and the way public services may be delivered in an open government setting (enabled by ICT), i.e. how public services may be created and delivered seamlessly to any citizen and business at any moment of time.

Digitising European Industry

On 19 April 2016, European Commission presented set of measures to Digitise European Industry. The measures to Digitise European Industry will help companies large and small, researchers and public authorities to make the most of new technologies. They will link up national and regional initiatives and boost investment through strategic partnerships and networks.

The purpose of this Communication is to reinforce the EU's competitiveness in digital technologies and to ensure that every industry in Europe, in whichever sector, wherever situated, and no matter of what size can fully benefit from digital innovations.

Facilitated by a dynamic framework for coordination and experience sharing between public and private initiatives at EU, national and regional level, the proposed actions are expected to mobilise close to 50 billion EUR of public and private investment in the next 5 years, explore and adapt when needed the legislative framework and reinforce coordination of efforts on skills and quality jobs in the digital age.
European Cloud Initiative

On 19 April 2016, European Commission presented the European Cloud Initiative, i.e. its blueprint for cloud-based services and world-class data infrastructure to ensure science, business and public services reap benefits of big data revolution. This initiative is part of a package of measures to strengthen Europe’s position in data-driven innovation, to improve competitiveness and cohesion and to help create a Digital Single Market in Europe.

By bolstering and interconnecting existing research infrastructure, the Commission plans to create a new European Open Science Cloud that will offer Europe’s 1.7 million researchers and 70 million science and technology professionals a virtual environment to store, share and re-use their data across disciplines and borders.

This will be underpinned by the European Data Infrastructure, deploying the high-bandwidth networks, large scale storage facilities and super-computer capacity necessary to effectively access and process large datasets stored in the cloud.

The European Cloud Initiative will make it easier for researchers and innovators to access and re-use data, and will reduce the cost of data storage and high-performance analysis. This world-class infrastructure will ensure Europe participates in the global race for high performance computing in line with its economic and knowledge potential. The user base will over time be enlarged from the initial scientific community to the public sector and to industry.

The user base of the European Open Science Cloud and of the European Data Infrastructure will be widened to the public sector, for example through large-scale pilots involving eGovernment and public sector stakeholders and by progressively opening the European Data Infrastructure to users from industry and the public sector to achieve a European dimension.

As the public sector generates massive amounts of data (e.g. Copernicus earth observation, INSPIRE location data) and needs larger computing capacity (e.g. for real time traffic and travel information systems, for smart city applications or for policy modelling), it will benefit from economies of scale, flexibility and continuity.

As a result, the public will thus benefit from cheaper, faster, better and interconnected public services and from better policy making based on affordable and secure compute- and data-intensive services. Moreover, the European Open Science Cloud will ensure that public data is fully discoverable, accessible and exploitable by scientists, policy makers and businesses. Lessons learnt will provide concrete guidance for the adoption of cloud-based services by public administrations across Europe.
ICT Standardisation Priorities for the Digital Single Market

The Commission adopted on 19 April 2016 a Communication setting up ICT standardisation priorities for the Digital Single Market as part of the package on Digitising European Industry. The initiate aims at re-energising the standard-setting system in Europe as a step towards industrial global leadership and digital innovation. The results of this plan will ensure that European standards are in place quickly enough to allow future devices to connect smoothly across the Digital Single Market.

The Commission has identified the following priority areas: 5G communications, cloud computing, the internet of things (IoT), (big) data technologies and cybersecurity. These are the essential technology building blocks of the Digital Single Market. A regular review of the priorities is planned so as to respond to changes in technology and society.

Stronger European leadership in standard setting in these areas should increase competitiveness and help European innovations better access the global market. The EU plans to support participation of European experts in international standardisation decisions, to help ensure European ideas contribute to global solutions.

Certain aspects of this priority plan also complement and develop specific public sector requirements identified in the revised version of the European Interoperability Framework for European Public Services, taking on board the standardisation needs of the European public administrations.

Open Source Strategy 2014 - 2017

The European Commission has reviewed its internal Open Source Software strategy. It addresses the procurement of open source software and the Commission's contribution to open source software projects. The strategy also provides for more software developed within the Commission to be published as open source.

In March 2015, the renewed strategy for internal use of open source software in the Commission was published.

Virtually all European governments and most of European Union’s public authorities at local, regional, national and European levels are engaged in modernising and even transforming themselves, through eGovernment.

At an operational level, the Commission needs to tackle two challenges: modernising its own 'internal' administration and operating professional trans-European services. Concerning the modernisation of its administration, the Commission in 2005 renewed its commitment to the e-Commission initiative which aimed at delivering better quality and more transparent services for staff and external stakeholders. This guarantees security of information, including protection of personal data, based on streamlined processes and interoperable information systems supported by a cost-effective, resilient and high performing ICT infrastructure.

Furthermore, special attention has been paid to the operation of trans-European services that support the implementation of EU legislation, from internal market regulations to consumer and health policies. Efficient operation of these services relies on online information services between public administrations across Europe, namely, those supported by the ISA programme.
**Previous strategies**

**EU eGovernment Action Plan 2011 - 2015**

The European eGovernment Action Plan 2011 - 2015 was launched on 15 December 2010 during the 'Lift-Off Towards Open Government' conference. The plan aimed to realise the vision of the 5th Ministerial eGovernment Conference on 18th November 2009, in Malmö, Sweden (the 'Malmö Declaration'). According to the vision, by 2015 European public administrations should be "recognised for being open, flexible and collaborative in their interactions with citizens and businesses. They use eGovernment to increase their efficiency and effectiveness and to constantly improve public services in a way that caters for user's different needs and maximises public value, thus supporting the transition of Europe to a leading knowledge-based economy."

**European Interoperability Strategy (EIS) for European public services**

The goal of the European Interoperability Strategy (EIS) was to define, in agreement and cooperation with Member States, a focused set of concrete actions both at national and EU level which will improve interoperability of public services in Europe.

In order to establish a systematic approach to the governance of Interoperability at EU-level, the EIS aimed to define the organisational, financial and operational framework for supporting cross-border and cross-sectoral interoperability as well as the exchange of information between European public administrations, taking into account the existing/proposed Community programmes.

In 2015, a new action was launched in the context of the Digital Single Market strategy adopted by the Commission in May 2015. This action concerns initiative was launched on the revision of the European Interoperability Strategy (EIS) and European Interoperability Framework (EIF). The Impact Assessment work started in November 2015 and should be concluded by June 2016.

The revised versions of the EIS and the EIF should be adopted by the Commission before the year end.

The ISA² programme will be a vital instrument for the implementation of the EIS and EIF as per Article 8 of the legal decision.

**European Information Society 2010**

In this context, in 2005, the European Commission launched a policy framework, embracing all aspects of the information, communication and audio-visual sectors. This framework was called 'i2010 - A European information society for growth and employment' and provided the broad policy guidelines for the emerging information society in the years up to 2010. This strategy, also known as 'European Information Society 2010', constituted the successor to the previous eEurope 2005 initiative.

---

6 Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions, Towards interoperability for European public services/* COM/2010/0744 final */

The i2010 strategy was reviewed on an annual basis and the pertinent annual reports also updated i2010 related actions. The i2010 strategy was succeeded by the 'Digital Agenda for Europe'.

**e-Commission 2012 - 2015**

The e-Commission 2012 - 2015 initiative is considered as a logical progression of e-Commission 2006-2010. It describes the principles on which the Commission intends to continue implementing its commitments in the eGovernment Action Plan, the Digital Agenda and the rationalisation exercise.

This initiative ran until 2015 and consisted of a vision, a set of principles and an action plan.

**Other relevant EU initiatives**

**A strategy for e-procurement**

E-procurement refers to the use of electronic communications by public sector organisations when buying supplies and services or tendering public works.

Increasing the use of e-procurement in Europe can generate significant savings for European taxpayers. These savings would maximise the efficiency of public spending in the current context of fiscal constraints. E-procurement can also provide a new source of economic growth and jobs, including by facilitating access to public procurement contracts by SMEs.

In April 2012 the European Commission adopted a Communication COM(2012) 179 setting out a strategy to make the use of e-procurement the rule in the EU by mid-2016.

In June 2013, the European Commission adopted a Communication COM(2013) 453 that identifies the state of implementation of "end-to-end e-procurement", i.e. the process from the electronic publication of notices to electronic payment, in the EU, as foreseen by the 2012 Communication ‘A strategy for e-procurement’.

**European Cloud Computing Strategy**

In September 2012, the European Commission adopted a strategy for “Unleashing the Potential of Cloud Computing in Europe”. The strategy outlines actions to deliver a net gain of 2.5 million new European jobs, and an annual boost of €160 billion to the European Union GDP (around 1%), by 2020. The strategy is designed to speed up and increase the use of cloud computing across all economic sectors. This strategy is the result of an analysis of the overall policy, regulatory and technology landscapes and of a wide consultation with stakeholders, to identify ways to maximise the potential offered by the cloud. This document sets out the most important and urgent additional actions. It represents a political commitment of the Commission and serves as a call on all stakeholders to participate in implementing these actions. Working groups are already engaged on this.

On December 27th 2014, the European Commission has published its first Call for Tender for Cloud Service.

Cloud services offer benefits in terms of infrastructure elasticity and scalability while favouring the pay-per-use model against upfront capital investments. The Cloud will enable the Commission to follow the ceaseless pace of today’s technological race among infrastructure providers where costs of storage, bandwidth and computing power are decreasing day by day while enabling at the same time innovative solutions for new challenges such as Big Data.
Depending on their security and data qualification, information systems can be deployed either in a Private Cloud operated for the Commission and EU Institutions only, or in the Public Cloud operated for external customers too. This hybrid approach allows the Commission to get the most effective solution under different circumstances to meet our changing needs.

In addition to the programmes, policy instruments, and the aforementioned number of funding programmes, there are a number of legislative initiatives with direct relevance for e-government, such as:

- the Regulation on electronic identification and trust services for electronic transactions in the internal market (eIDAS);
- the Directive on Public Sector Information to maximise the impact and benefits of Open Data;
- the Infrastructure for Spatial Information in the EU (INSPIRE) Directive establishing the location framework for government and commercial services and data;
- the Service Directive and its requirement that any requests to establish a company in another Member State shall be done electronically via the Points of Single Contact;
- the Directive on interconnection of EU business registers;
- the SUP proposal which for the first time introduces EU wide online registration for companies;
- the proposed Regulation on the circulation of public documents; etc.

Furthermore, the revised Better Regulation Commission Guidelines include a strengthened assessment of the digital dimension to help deliver initiatives which are ‘digital and internet ready’ so that virtual or physical goods and processes are treated in the same way.

For further details on the relevant legislative initiatives, please visit the Legal Framework section of this eGovernment Factsheet.

**European Multi-Stakeholder platform on ICT standardisation**

The European Multi Stakeholder Platform (MSP) on ICT standardisation was set up at the end of 2011. Based on a European Commission Decision 2011/EC 349/04 to advice on matters related to the implementation of ICT standardisation policies, it deals with:

- potential future ICT standardisation needs in support of European legislation, policies and public procurement;
- technical specifications for public procurements, developed by global ICT standards-developing organisations;
- cooperation between ICT standards-setting organisations;
- the Rolling Plan, which provides a multi-annual overview of the needs for preliminary or complementary ICT standardisation activities in support of the EU policy activities

The MSP is composed of representatives of national authorities from EU Member States & EFTA countries, by the European and international ICT standardisation bodies, and by stakeholder organisations that represent industry, small and medium-sized enterprises and consumers. It is co-chaired by the European Commission Directorates General GROWTH, and CONNECT. It meets four times per year.
Main EU programmes

ISA² (Interoperability Solutions for European Public Administrations) programme

On 25 November 2015, the ISA², the follow-up programme to ISA was officially adopted by the European Parliament and the Council of the European Union.

ISA (Interoperability Solutions for European Public Administrations) provided a framework that allowed Member States to work together to create efficient and effective electronic cross-border public services. The programme supported and maintained the European Interoperability Framework (EIF) and contained actions on:

- Trusted information exchange;
- Interoperability architecture;
- Assessment of the ICT implications of new EU legislation;
- Accompanying measures, such as communication activities, evaluation of progress in implementing the programme, and, among measures, the new action on the ISA collaboration platform, which resulted in the creation of the Joinup portal focusing on eGovernment, semantic interoperability and Open Source Software (OSS).

The follow-up programme, ISA², will cover the period 2016 - 2020 with a financial envelope of €131 million. This programme will support the development of interoperable digital solutions, which will be available to all interested public administrations in Europe.

The main beneficiaries of ISA² are public administrators at EU, national, regional and local level (direct beneficiaries), as well as citizens and businesses (indirect beneficiaries).

What is new in ISA²?

The new programme builds strongly on its predecessor, while also bringing a handful of new elements such as:

- a focus on the link between Public Administrations and businesses and citizens
- covering all levels of administration
- an essential contribution to the Digital Single Market strategy
- the goal of increased synergies with relevant EC initiatives
- the adoption of a holistic approach to IOP with the responsibility for European Interoperability Strategy (EIS), the European Interoperability Framework (EIF), the European Interoperability Reference Architecture (EIRA) and the European Interoperability Cartography (EICart).
The Connecting Europe Facility (CEF)

On 29 June 2011, the European Commission adopted a proposal for the next Multi-Annual Financial Framework for the period 2014-2020. In this Framework a new integrated investment instrument was proposed to improve Europe’s transport, energy and digital networks: ‘The Connecting Europe Facility’ (CEF). Well-functioning infrastructures are a key condition to achieve the Europe 2020 targets. By investing in the three main networks to make them smart, sustainable and fully interconnected, Europe’s competitiveness will be boosted and new jobs will be created.

CEF Digital has a budget of 1.14 billion euros, out of which 170 million euros are for Broadband activities, while 970 million euros are dedicated to Digital Service Infrastructures (DSIs) delivering networked cross-border services for citizens, businesses and public administrations. These projects are to contribute:

- Improvements in the competitiveness of the European economy;
- Promotion of the interconnection and interoperability of national, regional and local networks;
- Access to such networks, thus supporting the development of a Digital Single Market.

The Broadband component of the programme seeks to contribute to the achievement of the Digital Agenda targets of all European households having access to internet connections of 30 Megabits per Second by 2020, and of 50% of households subscribing to internet connections above 100 Megabits per Second by 2020.

In view of these targets, CEF aims at facilitating an efficient flow of private and public investments to stimulate the deployment and modernisation of broadband networks. At least one third of the broadband projects financially supported under CEF shall aim at speeds above 100Mbps.

The Digital Service Infrastructures (DSIs) will facilitate the cross-border and cross-sector interaction between European public administrations. This, in turn, will enable the provision of essential services for businesses and citizens in areas as diverse as electronic identification and procurement, and interoperable health services.

Projects will be firmly centred on deploying a relatively small number of trans-European infrastructures based upon mature technical and organisational solutions, and aimed at supporting exchanges and collaboration with and within the public sector, across the EU.

The DSIs also entails building infrastructures to roll-out the building blocks Large Scale Pilots have provided to ensure interoperability (such as eID, eProcurement, electronic Healthcare records, e-Justice) and to link up Member States’ infrastructures.

Horizon 2020

Horizon 2020 is an EU Research and Innovation programme with nearly €80 billion of funding available over 7 years (2014 to 2020).

Horizon 2020 is the financial instrument implementing the Innovation Union, a Europe 2020 flagship initiative aimed at securing Europe’s global competitiveness.

Seen as a means to drive economic growth and create jobs, Horizon 2020 has the political backing of Europe’s leaders and the Members of the European Parliament. They agreed that research is an investment in our future and so put it at the heart of the EU’s blueprint for smart, sustainable and inclusive growth and jobs.

By coupling research and innovation, Horizon 2020 is helping to achieve this with its emphasis on excellent science, industrial leadership and tackling societal challenges. The
goal is to ensure Europe produces world-class science, removes barriers to innovation and makes it easier for the public and private sectors to work together in delivering innovation. Horizon 2020 is open to everyone, with a simple structure that reduces red tape and time so participants can focus on what is really important. This approach makes sure new projects get off the ground quickly – and achieve results faster.

Horizon 2020 reflects policy priorities of the Europe 2020 strategy and addresses major concerns shared by citizens in Europe and elsewhere. Horizon 2020 covers seven different domains of actions called ‘Societal Challenges’. The Societal Challenge 6 ‘Europe in a changing world – Inclusive, innovative and reflective societies’ deals with a series of societal issues and among others addresses directly problems related to eGovernment and Modernisation of Public Administrations. The research and innovation actions in this area for 2014 and 2015 focused on demonstrating the open and collaborative government concept through the following topics:

- Research into using emerging technologies in public sector;
- Pilots on open participation of the youth in decision-making processes;
- ICT-enabled open government; innovation actions for mobile, personalised public services and transparency of public administrations;
- Design and creation of innovative applications by SMEs, in order to foster the delivery of mobile public services (eGov apps) for local and regional public authorities.

The Work Programme 2016-2017 supports eGovernment / ICT-enabled public sector innovation related activities through the following topics:

- Applied co-creation to deliver public services
- Co-creation between public administrations: once-only principle
- Policy-development in the age of big data: data-driven policy-making, policy-modelling and policy-implementation
- Understanding the transformation of European public administrations
- New business models for inclusive, innovative and reflective societies.

In addition to the aforementioned funding mechanisms, e-government is supported through a number of funding programmes:

**European Structural and Investment Funds (ESIF)**

The European Structural and Investment Funds also provide investments in the field of e-government in less favoured regions, as this is seen as a strategic component of their economic and social development. As stipulated in Article 9 of the Common Provisions Regulation, which lays down the common rules applicable to ESIF, each ESIF must also support eleven thematic objectives (TO), including thematic objectives 2 and 11 which are particularly relevant to the digitisation of public administrations.
ESIF Thematic Objective 2 (TO2)\(^8\), as set by the European Commission, aims at enhancing access to, use and quality of ICT. The main specific characteristics describing TO2 are:
- Extending broadband deployment and the roll-out of high-speed networks;
- Developing ICT products and services, e-commerce and enhancing demand for ICT;
- Strengthening ICT applications for e-government, e-learning, e-inclusion and e-health"; and
- Enhancing the accessibility, use and quality of information and communication technologies, through the development of digital literacy, investment in e-inclusion, e-skills and related entrepreneurial skill.

ESIF Thematic Objective 11 (TO11)\(^8\), as set by the European Commission, aims to enhance institutional capacity and to support the efficiency of public administrations. The European Social Fund (ESF) foresees two investment priorities under TO11:
- Investment in institutional capacity and in the efficiency of public administration and public services at the national, regional and local levels with a view to reforms, better regulation and good governance (article 3 (d) (i) ESF Regulation); and
- Capacity building for all stakeholders delivering education, lifelong learning, training and employment and social policies, including through sectorial and territorial pacts to mobilise in order to reform at the national, regional and local levels (article 3(d) (ii) ESF Regulation).

Structural Reform Support Programme (and Service)\(^9\)

The Union has identified the implementation of structural reforms among its policy priorities to set the recovery on a sustainable path, unlock the growth potential to strengthen the adjustment capacity, and support the process of convergence.

Yet the reforms must be well-designed, legislated and effectively implemented, and therefore it became necessary to establish a Structural Reform Support Programme with the objective of strengthening the overall capacity of Member States to prepare and implement growth-enhancing institutional, structural and administrative reforms, including through assistance for the efficient and effective use of Union funds, to the extent that these Member States request support from the Union for this purpose.

The intention is to provide for an extension – under the auspices of the Structural Reform Support Service (SRSS) – of technical support to all Member States requesting it.

Justice Programme

This programme will contribute to the further development of a European area of justice based on mutual recognition and mutual trust. The Justice Programme provides dedicated calls for e-Justice projects.

\(^{9}\) On 28 April 2016, COREPER (the Permanent Representatives Committee) agreed, on behalf of the Council of the European Union, its stance on a proposed regulation establishing a structural reform programme to help the Member States to implement reforms, and asked the Council’s presidency to start negotiations with the European Parliament.
Legal framework

Main legal texts impacting on the development of eGovernment

Data Protection/Privacy

In January 2012, the European Commission proposed a comprehensive reform of data protection rules in the EU. In this context, on 4 May 2016, the official texts of the relevant Regulation and the Directive have been published in the EU Official Journal in all the official languages.

The objective of this new set of rules is to give citizens back control over their personal data, and to simplify the regulatory environment for business. The data protection reform is a key enabler of the Digital Single Market which the Commission has prioritised. The reform will allow European citizens and businesses to fully benefit from the digital economy.

On 5 May 2016, Directive (EU) 2016/680 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data by competent authorities for the purposes of the prevention, investigation, detection or prosecution of criminal offences or the execution of criminal penalties, and on the free movement of such data, and repealing Council Framework Decision 2008/977/JHA entered into force and EU Member States have to transpose it into their national law by 6 May 2018.

Regulation (EC) No 45/2001 of the European Parliament and of the Council of 18 December 2000 on the protection of individuals with regard to the processing of personal data by the Community institutions and bodies and on the free movement of such data [Official Journal L8 of 12.01.2001].

This Regulation contains provisions aiming to protect personal data processed by European Union (EU) institutions and bodies. These provisions aim to ensure a high level of protection for personal data managed by Community institutions and bodies.

This Regulation also provides for the establishment of a “European Data Protection Authority”, an independent Community authority responsible for monitoring the correct application of the data protection rules by the EU institutions and bodies. This authority will be comparable to the data protection authorities established by Member States in accordance with Directive 95/46/EC on data protection. Citizens will thus be able to lodge complaints directly with that authority if they consider their data protection rights under the Regulation have not been respected.

Each Community institution and body shall appoint at least one person as Data Protection Officer with the task of cooperating with the Data Protection Supervisor and ensuring that the rights and freedoms of the data subjects are unlikely to be adversely affected by the data processing. Citizens enjoy legally enforceable rights under the Regulation, such as the right to access, rectify, block or delete personal data relating to them in files held by the Community institutions and bodies.

Directive 97/66/EC specifically deals with the protection of privacy in telecommunications. It states that Member States must guarantee the confidentiality of communication by means of national regulations. Any unauthorised listening, tapping, storage or other kinds of interception or surveillance of communications is illegal. Where calling-line identification is offered, users must be given the option not to subscribe to this service, or not to have their identification revealed when making a telephone call. Conversely, subscribers to this service must have the option to reject incoming calls from individuals who have blocked their calling-line identification. Additionally, the Directive states that where printed or electronic telecommunication directories exist, individuals are entitled to have their data removed from the list, in principle, at no cost.

It has been repealed by Directive 2002/58/EC. This directive is part of the Electronic communications regulatory framework, which is discussed below.

Directive 95/46/EC of the European Parliament and of the Council, of 24 October 1995, on the protection of individuals with regard to the processing of personal data and on the free movement of such data

To remove obstacles to free movement of data without diminishing the protection of personal data, Directive 95/46/EC (the data protection Directive) was developed to harmonise national provisions in this field and to ensure that all citizens have equivalent protection across the Union. The directive, effective from 24 October 1998, applies to 'any operation or set of operations which is performed upon personal data', called 'processing' of data. Such operations include the collection of personal data, its storage, disclosure, etc. The Directive applies to data processed by automated means (e.g. a computer database of customers) and to data that are part of or intended to be part of non-automated 'filing systems'. Access to the latter can vary, for example, the filing system may contain traditional card paper files, with information presented in alphabetical order.

The data protection Directive does not apply to data processed for purely personal reasons or household activities (e.g. an electronic personal diary or a file with details of family and friends). It does not apply either to areas such as public security, defence or criminal law enforcement, which are outside the competence of the EC and remain a national prerogative. National legislation generally provides protection for individuals in these areas.

Interconnection of business registers

Directive 2012/17/EU on the interconnection of business registers entered into force on 7 July 2012. Member States had two years to adapt their national laws to introduce the first set of provisions in the Directive, including a new obligation on business registers to make available documentation submitted by limited liability companies normally within 21 days of receipt. Ensuring that information about companies is always up to date is one of the main objectives of this Directive. Business registers also have to make available information on

---

10 Amended by Regulation (EC) No 1882/2003
the rules in their national law, according to which third parties can rely on certain company
documents. This information is also available on the e-Justice portal.

The Directive also requires a Business Registers Interconnection System (BRIS) to be
established. The Commission implementing Regulation (EU) 2015/884 sets out technical
specifications and procedures required for the system of interconnection of business
registers. By 8 June 2017 Member States will have to transpose the remaining rules and
make the necessary preparations for connecting to the new system. When the Directive is
fully transposed, BRIS will make it easy to access information on EU companies via the e-
Justice or other national portals. In addition, it will facilitate electronic communication
between registers in relation to cross-border mergers and branches of companies registered
in other Member States.

**eInvoicing**

electronic invoicing in public procurement**

EU countries and the European Commission decided to introduce a European Standard for
e-invoicing in response to the many e-invoice formats used across the EU. Once the e-
Invoicing Directive 2014/55/EU has been transposed into the national laws of EU countries
and the deadline for implementing the norm has passed, electronic invoices will be able to
flow seamlessly across the EU.

**Electronic communications regulatory framework (2002)**

The electronic communications regulatory framework consists of one Framework Directive
(Directive 2002/21/EC, of 7 March 2002) on a common regulatory framework for electronic
communications networks and services and four specific Directives. This framework has
been supplemented by the 'Telecoms Reform', a new package of rules originally due to be
transposed into national laws of the 27 Member States by May 2011.

The Framework Directive and its four accompanying Directives of the original 2002
regulatory package are described below:

access to and interconnection of electronic communications networks and associated
facilities (Access Directive)

This Directive establishes rights and obligations for operators and for undertakings seeking
interconnection and/or access to their networks. The principle is to allow competition rules
to act as an instrument for market regulation. However, insofar as there is no effective
competition on the market, the national regulatory authorities (NRAs) must act by imposing
obligations on operators with significant market power. The objective is to establish a
framework to encourage competition by stimulating the development of communications
services and networks, and also to ensure that any bottlenecks in the market do not
constrain the emergence of innovative services that could benefit the users. The approach
adopted is technologically neutral, i.e. the Directive does not intend to introduce rules to
affect technological progress but, instead, to establish a modus operandi to address market
issues.

The Directive applies to all forms of communication networks carrying publicly available
communications services. These include fixed and mobile telecommunications networks,
networks used for terrestrial broadcasting, cable TV networks and satellite, as well as
Internet networks used for voice, fax, data and image transmission.
On 25 November 2009, the Telecoms Package (for more information please see below) was adopted serving as a review of the EU Telecoms Framework of 2002 and serving a purpose to create a common set of regulations for the telecoms industry across all 27 EU member states. Within this scope, Directive 2002/19/EC has been amended by Directive 2009/140/EC.

The provisions of this Directive cover authorisations for all electronic communications networks and services, whether they are provided to the public or not. However, they only apply to the granting of rights to use radio frequencies where such use involves the provision of an electronic communications network or service, normally for remuneration. The aim is to establish a harmonised market for electronic communications networks and services by limiting regulation to the minimum that is strictly necessary.

The main innovation is the replacement of individual licences by general authorisations, while a special scheme for attributing frequencies and numbers continues to exist. According to this principle, the provision of electronic communications networks or services may only be subject to a general authorisation. In other words, the undertaking concerned may be required to submit a notification but it may not be required to obtain an explicit permission or authorisation via any other administrative act by the national regulatory authority (NRA), before exercising the rights stemming from the authorisation.

On 25 November 2009, the Telecoms Package (for more information please see below) was adopted serving as a review of the EU Telecoms Framework of 2002 and serving a purpose to create a common set of regulations for the telecoms industry across all 27 EU member states. Within this scope, Directive 2002/20/EC has been amended by Directive 2009/140/EC.

The aim of this Directive is to establish a harmonised framework for the regulation of electronic communications networks and services. It contains horizontal provisions serving the accompanying Directives, such as scope and general principles, basic definitions, general provisions on national regulatory authorities (NRA), the new concept of significant market power and rules for granting certain essential resources, such as radio frequencies.

In response to the convergence of technologies and the need for horizontal regulation of infrastructure, the framework covers all electronic communications networks and services, such as fixed-line voice telephony, mobile and broadband communications, cable and satellite television. On the other hand, the content of services delivered over electronic communications networks, such as broadcasting content or financial services, is excluded and so is telecommunications terminal equipment.

In June 2009 Regulation (EC) No 544/2009 amended directive Directive 2002/21/EC. The objective of this Regulation for amending Regulation (EC) No 717/2007 and Directive 2002/21/EC was to maintain and further develop a common set of rules to ensure that users of public mobile communications networks when travelling within the Community do not pay excessive prices for Community-wide roaming services (be it in respect of voice calls, SMS messages or data transmissions), thereby contributing to the smooth functioning of the internal market, while achieving a high level of consumer protection and safeguarding competition between mobile operators, cannot be sufficiently achieved by the Member States in a secure, harmonised and timely manner.
On 25 November 2009, the Telecoms Package (for more information please see below) was adopted serving as a review of the EU Telecoms Framework of 2002 and serving a purpose to create a common set of regulations for the telecoms industry across all 27 EU member states. Within this scope, Directive 2002/21/EC has been amended by Directive 2009/140/EC.

The Directive intends to ensure the availability of a minimum set of high quality services that are available to all users at an affordable price, without distortion of competition. It lays down obligations with regard to the provision of certain mandatory services, such as the retail provision of leased lines. It also establishes end-users' rights and the corresponding obligations of undertakings that provide publicly available electronic communications networks and services.

New technologies, and in particular the Internet and electronic messaging services, call for specific requirements to ensure that users have a right to privacy. The Directive tackles a number of issues of varying degrees of sensitivity, such as the retention of connection data by the Member States for police surveillance purposes (data retention), the sending of unsolicited electronic messages, the use of cookies, and the inclusion of personal data in public directories.

In March 2006, it was amended by **Directive 2006/24/EC** on the retention of data generated or processed in connection with the provision of publicly available electronic communications services or of public communications networks services. The aim of the latest Directive is to harmonise the provisions of the Member States concerning obligations incumbent on the providers of electronic communications services with respect to data retention. It was further amended in November 2009 by **Directive 2009/136/EC**. This directive aimed amongst some changes in the text at elaborating further on the security of processing and unsolicited communication.

In June 2013 **Commission Regulation (EU) No 611/2013** on the measures applicable to the notification of personal data breaches under Directive 2002/58/EC of the European Parliament and of the Council on privacy and electronic communications was adopted. This Regulation is limited to the notification of personal data breaches and therefore does not set out technical implementing measures concerning Article 4(2) of Directive 2002/58/EC on informing the subscribers in case of a particular risk of a breach of the security of the network.

**Electronic identification and trust services**

**The Regulation (EU) No 910/2014** on electronic identification and trust services for electronic transactions in the internal market (eIDAS Regulation) adopted by the co-legislators on 23 July 2014 is a milestone to provide a predictable regulatory environment to enable secure and seamless electronic interactions between businesses, citizens and
public authorities. The eIDAS Regulation, which is based on the Commission Communication (COM(2012)238 final of 4 June 2012), will increase the effectiveness of public and private online services, eBusiness and electronic commerce in the EU.

eID and eTS - namely electronic signatures, electronic seals, time stamp, electronic delivery service and website authentication - are inseparable by essence when analysing the requirements needed to ensure legal certainty, trust and security in electronic transactions.

In this regard, the eIDAS Regulation

- ensures that people and businesses can use their own national electronic identification schemes (eIDs) to access public services in other EU countries where eIDs are available.
- creates an European internal market for eTS by ensuring that they will work across borders and have the same legal status as traditional paper based processes. Only by providing certainty on the legal validity of all these services, businesses and citizens will use the digital interactions as their natural way of interaction.

This regulation will repeal Directive 1999/93/EC with effect from 1 July 2016. It enhances and expands the acquis of Directive 1999/93/EC.

This Regulation establishes the procedures and conditions required for a citizens’ initiative as provided for in Article 11 TEU and Article 24 TFEU. It stipulates the requirements for organisers and for signatories, the registration process of a proposed citizens’ initiative, Procedures and conditions for the collection of statements of support, and other important requirements for creating a citizen's initiative.

**eProcurement**

The Directive, which took effect on 26 February 2014, set out the legal framework for public procurement, including electronic procurement. It sets out procedures which must be followed before awarding a contract to suppliers (i.e. providers of works, supplies or services) when its value exceeds set thresholds, unless it qualifies for a specific exclusion - e.g. on grounds of national security.
Payment Services

**Directive 2006/123/EC** of the European Parliament and of the Council of 12 December 2006 on services in the internal market

The objective of PSD2 as adopted by the EU is to provide modern, efficient and cheap payment services and to enhance protection for European consumers and businesses.

On 8\textsuperscript{th} October 2015, the European Commission announced the adoption of the revised Directive on Payment Services (PSD2) by the European Parliament. This new law, as proposed by the European Commission in July 2013, enhances consumer protection, promotes innovation and improves the security of payment services. Some of the new rules will introduce the following:

- stricter **security requirements** for the initiation and processing of **electronic payments** and the protection of consumers’ financial data;
- open the EU payment market for companies offering consumer or business-oriented payment services based on the access to information about the payment account – the so called “payment initiation services providers” and “account information services providers”;
- enhancement of consumers’ rights in numerous areas, including reducing the liability for non-authorised payments, introducing an unconditional ("no questions asked") refund right for direct debits in euro; and
- prohibition of surcharging (additional charges for the right to pay e.g. with a card) whether the payment instrument is used in shops or online.

Re-use of Public Sector Information (PSI)

The term Public Sector Information (PSI) refers to documents, databases and other information produced, collected and stored by public sector bodies. Thanks to the aid of ICT, PSI can now be processed in an efficient, effective and user friendly manner, creating a variety of new opportunities for its exploitation.

Directive 2013/37/EU is amending the **Directive 2003/98/EC** of the European Parliament and of the Council, of 17 November 2003, on the re-use of public sector information that set out a **framework** for the conditions of its reuse and aims to ensure equal treatment for commercial editors within the internal market. Public sector organisations authorising this type of reuse continue to hold copyright and related rights. They are, however, invited to exercise their copyrights in a way that facilitates re-use.

Directive 2003/98/EC laid down a clear obligation for Member States to make all documents re-usable unless access is restricted or excluded under national rules on access to documents and subject to the other exceptions laid down in this Directive. The Directive does not seek to define or to change access regimes in Member States, which remain their responsibility.

The scope of Directive 2003/98/EC was extended to libraries, including university libraries, museums and archives by **Directive 2013/37/EU**; and Member States were obliged to transpose it by 18 July 2015.
Services Directive

The objective of the Services Directive is to release the untapped growth potential of services markets in Europe by removing legal and administrative barriers to trade in the services sector.

The simplification measures foreseen by the Directive should significantly facilitate life and increase transparency for SMEs and consumers when they want to provide or use services in the single market.

The Directive requires the Member States to simplify procedures and formalities that service providers need to comply with. In particular, it requires Member States to remove unjustified and disproportionate burdens and to substantially facilitate the establishment of a business and the cross-border provision of services.

Pursuant to the Directive, Member States are obliged to set up "points of single contact", through which service providers can obtain all relevant information and deal with all administrative formalities without the need to contact several authorities. The "points of single contact" have to be accessible at a distance and by electronic means.

The Services Directive also strengthens the rights of recipients of services, which can be both consumers and businesses. It also lays down a set of measures to promote a high quality of services and to enhance information and transparency relating to service providers and their services.

Finally, the Services Directive obliges the Member States to cooperate with each other in order to ensure efficient supervision of providers and their services.

Spatial Information

On 25 April 2017, Directive 2007/2/EC of the European Parliament and of the Council of 14 March 2007 establishing an Infrastructure for Spatial Information in the European Community (INSPIRE) was published in the official Journal, establishing an infrastructure for spatial information in Europe to support Community environmental policies, and policies or activities which may have an impact on the environment. It entered into force on the 15th May 2007 and it will be implemented in various stages, with full implementation required by 2019.

The INSPIRE directive aims to create a European Union (EU) spatial data infrastructure. This will enable the sharing of environmental spatial information among public sector organisations and better facilitate public access to spatial information across Europe.

A European Spatial Data Infrastructure will assist in policy-making across boundaries. Therefore the spatial information considered under the directive is extensive and includes a great variety of topical and technical themes.

The Telecoms Reform (2009)

The Telecoms Package was the review of the European Union Telecommunications Framework from 2007 – 2009. The objective of the review was to update the EU Telecoms Framework of 2002 and to create a common set of regulations for the telecoms industry across all 27 EU member states.
The rapid change affecting the sector, notably with regard to the growth of Voice-Over-IP (VOIP) telephony services, as well as to the uptake of television services through broadband lines, resulted in an agreement on the reform of Telecoms in the EU, reached by the European Parliament and the Council of Ministers on 4 November 2009. Two additional Directives and one new Regulation were adopted:

This amended Directives 2002/21/EC (framework), 2002/19/EC (access) and 2002/20/EC (authorisation) of the 2002 regulatory framework.

This amended Directives 2002/22/EC (universal service) and 2002/58/EC (privacy and electronic communications) of the 2002 framework, as well as **Regulation (EC) No 2006/2004** on cooperation between national authorities responsible for the enforcement of consumer protection laws.

The regulation established the new Body of European Regulators for Electronic Communications (**BEREC**) and the Office. The new body will help ensure fair competition and more consistency of regulation on the telecoms markets. The aim that BEREC replaces the present loose cooperation among national regulators in the form of the 'European Regulators Group' with a better structured and more efficient approach. BEREC decisions will be made, as a rule, by majority of heads of the 27 national telecoms regulators.

The most prominent reforms in the new package of rules for Europe's telecoms networks and services include:

- a right of European consumers to change, in one working day, fixed or mobile operator while keeping their old phone number;
- better consumer information;
- protecting citizens' rights relating to Internet access by a new Internet freedom provision;
- new guarantees for an open and more 'neutral' net;
- consumer protection against personal data breaches and spam;
- better access to emergency services, such as the 112 pan-European number;
- greater independence for national telecoms regulators;
- a new Commission say on competition remedies proposed by national regulators for telecoms markets;
- functional separation as a means to overcome competition issues;
- accelerating broadband access for all Europeans;
- encouraging competition and investment in next generation access networks.
**Actors**

**Main roles and responsibilities**

**Policy Strategy**

**Vice-President of the European Commission responsible for the Digital Single Market**

As **Vice-President for the Digital Single Market**, M. Andrus Ansip will steer and coordinate the work of several Commissioners, in particular the Commissioners for Digital Economy and Society; Internal Market, Industry, Entrepreneurship and SMEs; Employment, Social Affairs, Skills and Labour Mobility; Justice, Consumers and Gender Equality; Economic and Financial Affairs, Taxation and Customs; Regional Policy; and Agriculture and Rural Development.

His tasks include:

- Leading the Project Team **"Digital Single Market"**.
- Creating a connected Digital Single Market and making Europe a world leader in information and communication technology.
- Breaking down national silos in telecoms regulation, in copyright and data protection legislation and in the management of radio waves.
- Helping build the framework conditions for protecting citizens online, including fighting against cybercrime.
- Simplifying consumer rules for online shopping.
- Mobilising additional public and private investment for infrastructure such as broadband networks.
- Promoting digital and eGovernment approaches in national and EU administrations.
- Supporting the development of cultural and creative industries in Europe.

**Commissioner responsible for Digital Economy and Society**

As **Commissioner for Digital Economy and Society** M. Günther Oettinger is responsible for DG for Communications Networks, Content and Technology (CNECT), DG Informatics (DIGIT), the relevant parts of the Innovation & Networks Executive Agency (INEA), the relevant parts of the Executive Agency for Small and Medium-Sized Enterprises (EASME), the relevant parts of the Research Executive Agency (REA) and the relevant parts of the Education, Audio-visual and Culture Executive Agency (EACEA).

His tasks include:

- Preparing ambitious legislative steps towards a connected Digital Single Market by breaking down national silos in telecoms regulation, in copyright and data protection legislation, in the management of radio waves and in the application of competition law.
- Adding more ambition to the ongoing reform of the EU’s telecoms rules and developing a common approach to managing radio-spectrum use across the EU.
- Modernising copyright rules.
- Developing measures to make online communications and data more secure.
- Supporting the deployment of a high-quality, digital infrastructure.
Coordination/Implementation

Directorate-General for Informatics (DIGIT)

The mission of the Directorate-General for Informatics (DIGIT) is to deliver digital services to enable EU policies and to support the Commission’s internal administration.

With this goal in mind, DIGIT as trusted partner has the responsibility to:

- Provide the EC, and whenever appropriate other European Institutions and bodies, with high quality and innovative:
  - **Workplace solutions**: creating new ways of working and collaboration for staff;
  - **Business solutions**: delivering information systems supporting rationalised business processes within the framework of the corporate IT Governance strategy;
  - **Infrastructure solutions**: providing reliable, cost-effective and secure infrastructure and services;
  - **Effective solutions**: aligning IT investments with business priorities, facilitating relationships with our strategic partners, balancing risk with business value for the Institution

- Support the modernisation of public administrations by promoting and facilitating interoperability so that European public administrations can work seamlessly together across boundaries - Interoperability solutions

The Directorate-General for Informatics is also responsible for the coordination of the e-Commission strategy and its implementation via the delivery of IT systems and services. Moreover, through the ISA² programme, DIGIT facilitates the deployment of pan-European eGovernment services to administrations, citizens and enterprises – businesses.

**DIGIT Unit B6 - Interoperability solutions for European public administrations (ISA)**

The Unit manages the execution of the programme on interoperability solutions and common frameworks for European public administrations, businesses and citizens (ISA2 programme) as a means for modernising the public sector.

In the period 2005-2009, this objective was implemented under the IDABC programme on Interoperable Delivery of European eGovernment Services to public Administrations, Business and Citizens. To achieve its objectives, IDABC issued recommendations, developed solutions and provided services that enabled national and European administrations to communicate electronically and offer modern public services to businesses and citizens in Europe. The programme also provided financing to projects that addressed European policy requirements and improved cooperation among administrations across Europe.

The follow up programme ISA ran from 2010-2015. ISA was based on the experience gained from IDABC and its evaluations. It aimed at facilitating efficient and effective electronic cross-border and cross-sector interaction among European public administrations, and at enabling the delivery of electronic public service through common solutions. Thereby, it focused on ensuring availability of common frameworks (such as policies, specifications and methodologies), common services (including both applications and infrastructures), as well as generic tools (such as demonstrators and shared and collaborative platforms). Moreover, various sectors were also supported in assessing the ICT implications of Community legislation and in planning the implementation of relevant solutions.

ISA² is the follow-up programme to ISA. ISA² started on 1st January 2016 and it will last until 31 December 2020. ISA² expands the scope of its predecessor, by explicitly including
regional and local authorities, and providing a link to citizens and businesses. Furthermore, the programme will develop, maintain and promote a holistic approach to interoperability in the Union so as to eliminate the fragmentation of the current ‘digital service provisioning’ landscape, which constitutes a risk for accomplishing the Digital Single Market.

It will be revised once a year to reflect changes in policies or priorities. The Commission implements the ISA² work programme via public procurement procedures.

**Directorate General for Communications Networks, Content & Technology (DG CONNECT)**

The Directorate General contributes to EU goals in the Digital Age: human advancement, fairness, jobs and growth. It seeks to foster innovation, creativity, culture, excellent research and competitive markets as well as a trustable, accessible and positive digital experience for every European citizen and manages the Digital Agenda of the EU.

Among DG CONNECT's responsibilities are:

- Fund high-quality ICT research and innovation that delivers imaginative and practical solutions to both technological and societal challenges through the EU research and innovation strategy. We also work with researchers globally;
- Promote greater use of, and public access to a "connected Digital Single Market", for goods and services;
- Ensure that people have the right skills and confidence to use the new technologies as part of work and everyday life and that Europe has the same rights, freedoms and protection online as offline;
- Work to give everyone in Europe a fast connection to an open Internet;
- Support European innovators, entrepreneurs and start-ups;
- Help Europe’s culture, creative and audio-visual sectors to thrive. The DG supports the freedom of expression, freedom of information, freedom and pluralism of the media;
- Champion digital government and public services across Member States and within the Commission.

**DG CNECT Unit H3 – Public Services**

The Unit leads the development and deployment of EU Digital Public Services, focussing on cross-border excellence in eGovernment, and based on the eGovernment Action Plan 2011-2016. This includes the coordination of the cross-border services support under the CEF (Connecting Europe Facility) for DG CONNECT. In this context the unit is responsible for the DG's eGovernment portfolio which includes the eGovernment policy within the 'Digital Agenda for Europe' and the 'eGovernment Action Plan 2016-2020', and the deployment of innovative technologies in public administrations and governments. The eGovernment Action Plan is used for implementing the necessary actions to transform administrations into more open, transparent and collaborative entities interacting efficiently with increasingly mobile businesses and citizens.

**Individual DGs**

Within the European Commission, individual Directorates-General are responsible for the implementation of IT solutions within the mandate of their respective competencies, such as Directorates-General for Internal Market, Industry, Entrepreneurship and SMEs (DG GROWTH), for Employment, Social Affairs and Inclusion (DGEMPL) and for Regional and Urban Policy (DG REGIO).
Audit/Assurance

Internal Audit Service (IAS) of the European Commission

Operating under the responsibility of M. Frans Timmermans, First Vice-President, in charge of Better Regulation, Inter-Institutional Relations, the Rule of Law and the Charter of Fundamental Rights, the Internal Audit Service (IAS) is a core part of the internal audit system for the European Commission and EU agencies. The mission of the IAS is to provide independent, objective assurance and consulting services designed to add value and improve the operations of the European Commission.

</tbody>
</table>

| Name: STESTA: Trans European Services for Telematics between Administrations |
|--------------------------|-----------------------------|
| **Objective:** Basic Infrastructure |
| **Description:** STESTA is the European Community's own private, IP-based network. It offers a telecommunications interconnection platform that responds to the growing need for secure information exchange between European Public Administrations, allowing officials from different Ministries to communicate at a trans-European level, in a safe and prompt manner. The STESTA network service is the continuation of the TESTA network which began in 1996 and entered its second phase in early 2000. It now connects almost all EU Institutions, EU agencies and Member States, while Initiatives to connect further administrations are currently ongoing, including those of Candidate Countries. |
Name: EUSurvey

Objective: Online Questionnaire Management System

Website: https://joinup.ec.europa.eu/software/eusu

Description: EUSurvey, the new version of IPM, is a multilingual online survey management system built for the creation and publication of surveys and public consultations. It covers all steps of a survey life cycle, from the design to the launch of the survey to the analysis and publication of results. It offers different types of questions, from simple text and multiple-choice questions to spreadsheet questions or multi-media survey elements. Results can be displayed as histograms, percentages or in full detail and can be exported to different formats and published automatically on a dedicated webpage within the application. It is widely accessible and provides support for either identification or anonymity, depending on survey requirements.

While EUSurvey covers the functionalities of the IPM system, it also offers additional features and enhancements to improve the usability and attractivity of the application.

Administrations, businesses and private associations are given the opportunity to use the EUSurvey Open Source release for their own needs.

Name: e-TrustEx

Objective: Documents exchange platform

Website: https://joinup.ec.europa.eu/software/openetrustex/home

Description: Open e-TrustEx is an open-source platform offered to Public Administrations at European, national and regional level to set up secure exchange of digital structured and unstructured documents from system to system via standardised interfaces.

It allows Public Administrations to replace paper documents or files stored on DVDs and CDs by system-to-system exchange of information, using a technologically advanced platform.

Name: GÉANT

Objective: Flagship European e-Infrastructure

Website: http://www.geant.net/About/Pages/home.aspx

Description: GÉANT is the pan-European research and education network that interconnects Europe’s National Research and Education Networks (NRENs). They connect over 50 million users at 10,000 institutions across Europe, supporting research in areas such as energy, the environment, space and medicine. GÉANT is a flagship project of the EU, key to keeping Europe at the forefront of the global research race.
**Name:** Connecting Europe Facility (CEF) Building Blocks

**Objective:** European e-Infrastructure

**Website:** https://joinup.ec.europa.eu/community/cef/og_page/catalogue-building-blocks

**Description:** Under the Multi-annual Financial Framework for the period 2014 – 2020, a new integrated investment instrument was created to improve Europe’s transport, energy and digital networks: 'The Connecting Europe Facility’ (CEF). Well-functioning infrastructures are a key condition to achieve the Europe 2020 targets.

The CEF building blocks are a set of highly reusable tools and services that have been mainly developed and piloted by the Member States in different large scale pilots. The building blocks that are currently available for the reuse are the following: CEF eID, CEF eSignature, CEF eInvoicing, CEF eDelivery, and CEF Automated Translation.
Internal Administration Services

<table>
<thead>
<tr>
<th>Name:</th>
<th>ABAC (Accrual Based Accounting) Information System</th>
</tr>
</thead>
<tbody>
<tr>
<td>Objective</td>
<td>Accounting Information Management</td>
</tr>
<tr>
<td>Description:</td>
<td>In December 2002, the Commission presented an ambitious action plan to switch its general accounts to accrual base as of 2005. Up to this point the known as 'cash accounting' approach was used: transactions were recorded only when cash was received or paid out, making it impossible to distinguish between the purchase of an asset and the payment of an expense. As planned, in January 2005, the new accounting system became operational and a new set of accounting rules came into force. This transition was supported by the development of a system of Accrual Based Accounting, or ABAC, which represents a significant evolution of the Commission’s financial systems.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Name:</th>
<th>SYSPER 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Objective</td>
<td>Human Resource Management</td>
</tr>
<tr>
<td>Description:</td>
<td>SYSPER2 is the Human Resource Management information system of the European Commission. It became operational in July 2001 and serves all of the more than 30,000 Commission staff. The system supports traditional personnel administration areas, such as recruitment, career management and time management, as well as further topics including job descriptions, performance assessments and the management of promotions. The design was guided by the ‘uniqueness of information’ principle: information has to be entered only once, at the source (e.g. by individual staff members or the middle management), and can be subsequently used by other system stakeholders through integration of their respective back-office systems, as well as by sharing common data via a central repository.</td>
</tr>
</tbody>
</table>
**Name:** Decide

**Objective:** IT system for the management of the European Commission’s decision-making process / procedures, documents and workflow

**Description:** In the context of the on-going rationalisation process, the Secretariat-General (SG) of the European Commission has launched a thorough reform of the decision-making procedures. The objective is to streamline and harmonize procedures and to consolidate existing applications into one integrated system ("Decide"), supporting the whole process from planning to dissemination, across all types of documents.

The Decide system relies on the existing core applications. Applications currently supporting specific procedures will be absorbed, while others will be integrated.

The implementation of the Decide project is split in different iterations:

- The first iteration focussed on rationalising the core internal Commission decision-making procedures and implementing the IT foundations supporting these changes. It included the definition of the Single Entry Point and the establishment of a solid foundation for the Decide system, based on robust and flexible core applications, to adapt to various evolving types of documents and procedures. The first iteration went into production on February 2015.

- The second iteration covers the integration of Enterprise Search (the European Commission's corporate search solution) in Decide and changes for the new Commission.

- The third iteration includes the rationalisation and rebuilding of the decision step, the renewal and integration of the planning step in Decide and the improvement of the handling of implementing and delegated acts.

The Decide system enables electronic management of all documents adopted by the Commission. After adoption, Decide forwards electronic copies of such documents (e.g. directives, regulations, decisions ...) to all relevant EU Institutions, as well as to the permanent delegations of the Member States and to the national parliaments and local governments in the EU. Due to wide availability, Decide uses e-mail to send these sets of documents to national parliaments. Some recipients have integrated the accompanying XML descriptor files with workflow tools on their side.

**Name:** ECAS - European Commission Authentication System

**Objective:** Authentication System

**Further information:** [https://webgate.ec.europa.eu/cas/help.html](https://webgate.ec.europa.eu/cas/help.html)

**Description:** The Commission's Authentication Service is the system for logging on to a whole range of web sites and online services run by the Commission. It differentiates between the European institution or body depending on whether the user works for a commission service or not. In this case the option „External" should be chosen.
<table>
<thead>

  [http://ec.europa.eu/isa/documents/publications/brochure-mt@ec-a5-v3_en.pdf](http://ec.europa.eu/isa/documents/publications/brochure-mt@ec-a5-v3_en.pdf) |
| **Description:**     | Documents used by the European Commission, other European Institutions and public administrations in the multilingual environment of the European Union need to be available in different national languages. The sheer volume of content makes this an impossible task to achieve using human translators alone. 

With MT@EC, the Commission has launched a new system based on Statistical Machine Translation (SMT) that provides an improved machine translation service in terms both of quality of output and number of supported languages. A total of 552 language pairs covering all of the EU official languages are currently provided. The service run by the Commission guarantees continuity and quality of service, as well as respect of confidentiality and other legal aspects related to trust in information exchange.

MT@EC offers:

- web-user interface: accessible for humans via a standard web browser
- machine-to-machine interface: accessible for machines via a web service protocol.

### Community Database on Accidents on the Roads in Europe (CARE)

**Policy area:** Road Safety Policy  
**Further information:** [http://ec.europa.eu/transport/road_safety/index_en.htm](http://ec.europa.eu/transport/road_safety/index_en.htm)

**Description:** The CARE system was created on 30 November 1993 (93/704/EC) via a Council decision. Its purpose is to provide a set of tools to identify and quantify road safety problems throughout the European roads, evaluate the efficiency of road safety measures, determine the relevance of Community actions and facilitate the exchange of experience in this field.

In contrast to most other existing international databases, the CARE system features a high level of disaggregation database: it contains detailed data on individual accidents, as collected by the Member States. This approach allows for considerable flexibility in analysing accident-related data.

### European Environment Information and Observation Network (Eionet)

**Policy area:** Environment  
**Website:** [http://www.eionet.europa.eu/](http://www.eionet.europa.eu/)

**Description:** Eionet is a partnership network between the European Environment Agency (EEA), five European Topic Centres (ETCs) and a network of approx. 900 experts from 39 countries in over 300 national environment agencies and other relevant bodies. These constitute the National Focal Points (NFPs) and the National Reference Centres (NRCs).

Organisations and individuals in the network are supported by an extensive information technology infrastructure, known as e-Eionet, aimed to ensure harmonised electronic collection, handling and provision of data reported on the European environment.

### Trade Control and Expert System (TRACES)

**Policy area:** Health & Food Safety  
**Website:** [http://ec.europa.eu/food/animal/diseases/traces/index_en.htm](http://ec.europa.eu/food/animal/diseases/traces/index_en.htm)

**Description:** TRACES is an integrated web-based veterinary system for facilitating traceability of live animals. Through TRACES, information between all related national and Community authorities is coordinated to provide rapid reaction in case of animal diseases outbreaks. The TRACES system was established by the Commission Decision 2004/292/EC of 30 March 2004 and is maintained by the Directorate General for Health and Food Safety.

</thead>
<tbody>
<tr>
<td><strong>Policy area:</strong></td>
<td>Customs and Taxation</td>
</tr>
<tr>
<td><strong>Description:</strong></td>
<td>‘CCN/CSI network’ means the common platform based on the common communication network (hereinafter the ‘CCN’) and common system interface (hereinafter the ‘CSI’), developed by the Union to ensure all transmissions by electronic means between competent authorities in the area of customs and taxation. The network is also used to exchange statistical micro data since 2015. The Common Communications Network (CCN) and the Common Systems Interface (CSI) is an interoperability infrastructure that has been in production since 1999 and is composed of: - The Common Communications Network (CCN), a series of physical gateways located either in the National Administration or in DG Taxation and Customs Union premises. These gateways are interconnected in a secure way using an international IP network and locally connected to the application platforms within the national administration; They implement all functions of the system, which are made available through CSI; CCN is going to rely soon on sTESTA (see Chapter on Infrastructure) - The Common Systems Interface (CSI) is a set of protocols and programming interfaces allowing the above mentioned application platforms to use CCN so as to exchange information. CSI assures the availability of a harmonised service interface in the heterogeneous systems in the national administrations. As from the beginning of 2009, the CCN/CSI network is also supporting the on-going cooperation between the Administrations of third countries (such as Russia), the Commission, the Member States and European Agencies.</td>

### VAT Information Exchange System (VIES) - Administrations

**Name:** VAT Information Exchange System (VIES) - Administrations  
**Policy area:** Taxation  
**Further information:** [http://ec.europa.eu/taxation_customs/taxation/vat/traders/vat_number/index_en.htm](http://ec.europa.eu/taxation_customs/taxation/vat/traders/vat_number/index_en.htm)  
**Description:** With the completion of the Single Market on 1 January 1993, fiscal customs based controls at internal frontiers were abolished and a new VAT control system was put in place for intra-Community trade. The most significant benefit was the reduction of the administrative burden on companies, with the elimination of some 60 million customs documents per year. The computerised VIES manages the flow of data held across national VAT administrations, while enabling them to **monitor and control the flow of intra-Community trade** and to detect all kinds of irregularities.

**Name:** SFC2014 - System for Fund Management in the European Community 2014-2020  
**Policy area:** Multiple policy areas  
**Description:** SFC2014’s main function is the electronic exchange of information concerning shared Fund management between Member States and the European Commission. It has for objective to be the common Information System to manage jointly with Member States for the period 2014-2020 Structural Funds of DG REGIO, DG EMPL, DG AGRI, DG MARE and DG HOME. It is the follow-up of SFC2007.

### SIMAP - Information system for European public procurement

**Name:** SIMAP - Information system for European public procurement  
**Website:** [http://simap.ted.europa.eu/](http://simap.ted.europa.eu/)  
**Description:** The SIMAP portal contains EU-wide information on public procurement opportunities, including a collection of standard forms, access to national procurement databases, sections covering relevant legislation and useful links, as well as information on relevant codes and nomenclatures.

These include the [Common Procurement Vocabulary](http://simap.ted.europa.eu/) (CPV), a single classification system for public procurement aimed at standardising all references used by contracting authorities and entities to describe the subject of procurement contracts.

Moreover, the eNotices section of the portal includes an online tool for preparing public procurement notices and publishing them in the Supplement to the Official Journal of the European Union. The portal is managed by the [Publications Office of the European Union](http://simap.ted.europa.eu/).
### Internal Market Information System (IMI)

**Name:** Internal Market Information System (IMI)  
**Policy area:** EU Single Market  
**Website:** [http://ec.europa.eu/internal_market/imi-net/](http://ec.europa.eu/internal_market/imi-net/)

**Description:**
The IMI system is an electronic tool for multilingual, fast and secure exchange of information to enable day-to-day cooperation in the implementation of the internal market among the Member States. Relevant legislation includes the revised Professional Qualifications Directive (2005/36/EC) and the Services Directive (2006/123/EC).

IMI comprises a number of horizontal applications to support a range of internal market legislation and vertical applications to support specific pieces of legislation. The other main component of IMI is a database of pre-translated question sets, related to mutual assistance provisions of the relevant legislation.

### Excise Movement and Control System (EMCS)

**Name:** Excise Movement and Control System (EMCS)  
**Policy area:** Taxation and customs

**Further information:** [http://ec.europa.eu/taxation_customs/taxation/excise_duties/circulation_control/index_en.htm](http://ec.europa.eu/taxation_customs/taxation/excise_duties/circulation_control/index_en.htm)

**Description:**
The Excise Movement and Control System (EMCS) is a computerised system for monitoring the movement of excise goods under duty suspension in the EU.

It records, in real-time, the movement of alcohol and tobacco and energy products for which excise duties have still to be paid.

More than 80 000 economic operators currently use the system, and it is a crucial tool for information exchange and cooperation between Member States.

The purpose of the EMCS is to:

- Combat fiscal fraud, with real-time information and checks on goods being moved under duty-suspension
- Ensure the secure movement of excise goods for which duty has still to be paid, with pre-dispatch checks on traders
- Simplify procedures for traders, with a standardised, electronic system for the whole EU
- Speed up the release of guarantees when goods arrive at their destination
- Create a paperless administration.
<table>
<thead>
<tr>
<th>Name:</th>
<th>Common Emergency Communication and Information System (CECIS)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Policy area:</td>
<td>Civil protection</td>
</tr>
</tbody>
</table>
| Description: | The CECIS aims to protect citizens from natural and technical disasters and other hazards by interconnecting relevant authorities at European level.

The end-users of the CECIS system are the Emergency Response Centre Coordination (ERCC) and the National Contact Points (NCPs). The ERCC, operated within ECHO 24/7, has been set up to support a coordinated and quicker response to disasters both inside and outside Europe using resources from 32 countries participating in the EU Civil Protection Mechanism while also continually monitoring for disasters. In a major role the ERCC acts as a communication hub between the affected countries, resource countries and the experts in the field through the Common Emergency Communication and Information System (CECIS) to facilitate day to day and crises communications.

As of December 2014, the Common Emergency Communication and Information System (CECIS) operates on two independent applications: the existing CECIS for civil protection operations continues on a secure TESTA network (the European Union’s secure Trans European Services for Telematics between Administrations network) and the newly launched internet-based system will be dedicated to marine pollution incidents. The new system will allow for quick communication between MS’ coast guards and marine pollution authorities in the event of major disasters at sea and contain a database of available response capacities. CECIS Marine Pollution will be open to all Member States as well as the coastal states in the EU Neighbourhood that are part of the regional sea conventions.

Although built on the same concept, the new application is modernized and adapted to the specific maritime needs. Later this year it will be linked also to SafeSeaNet, a system managed by the European Maritime Safety Agency for reporting maritime incidents in the EU.
Name: MOVEHUB
Policy area: Land Transport Policy and Road Safety
Further information:

Description: The MOVEHUB is a system to exchange structured messages between different countries and it currently integrates:

**TACHOnet (TACHOgraph NETwork)**
- The TACHOnet system was created in 2006 on a voluntary basis to exchange structured data between Member States on driver cards, in order to reduce the frauds.
- The Tachograph Regulation 165/2014, requires Member States to exchange information electronically in order to ensure that the tachograph is properly used to apply the social road transport rules. It will make the use of TACHOnet mandatory for all the Member States from 02/03/2018. The implementing rules are described in Regulation 2016/68.

**ERRU (European Register of Road transport Undertakings)**
- Regulation (EC) No 1071/2009 foresees that Member States set up national electronic registers of road transport undertakings. The interconnection of these registers is described in Regulation 2016/480.

**RESPER (RESeau PERmis de conduire)**
- The main objective of this network is to strengthen cooperation between Member States.
- The Third Driving License Directive (2006/126/EC) compels Member States to exchange driving license information via ‘... the driving license network set up for these purposes (art.15) ...’ The systematic exchange of driver's license information between Member States would help in combating document fraud and the circumvention of national restrictive measures imposed for driving offences and thus improving road safety.
TENtec is the European Commission's information system to coordinate and support the Trans-European Transport Network Policy (TEN-T). It is based on two pillars:

- The first pillar focuses on policy-related information by storing and managing technical, geographical and financial data for the analysis, management and political decision-making related to TEN-T and the underlying funding programme, the Connecting Europe Facility (CEF). The core TENtec modules are OMC (Open Method of Coordination) and iReport, which are accessible through the TENtec Private Portal.

- The second pillar is related to grant management activities, managed by the Innovation and Networks Executive Agency (INEA), to support the necessary workflows for issuing grant agreements after completion of the selection cycle for new projects - including proposal submission and reception and the required web interfaces. The underlying modules are eSubmission, Action Status Report, Project Follow-Up, Evaluation and Grant Agreement.

Moreover, TENtec also enables the European Commission to easily compile information and create timely reports & maps. All parties concerned benefit from an increased visibility, data quality and systematic up-to-date overview of the budget execution and technical implementation for each TEN-T/CEF project.

TENtec acts as a bridge to Member States ministries and other key stakeholders (DG REGIO, DG ENV, EIB and neighbouring countries) and includes support for transport modelling of future policy and budgetary scenarios, briefings, the mapping of TEN-T/CEF co-funded projects and other layers (alternative fuels, secure and safe parking etc.).

The seamless inclusion of Geographical Information Systems (GIS) also supports interactive maps and satellite overlays (e.g. OpenStreetMap). With these features in place, TENtec was able to provide full support to the policy-making process, leading to the European Commission's TEN-T Regulation and the CEF.

**Name:** eDAMIS - Electronic Data files Administration and Management Information System

**Further information:** [https://webgate.ec.europa.eu/edamis/helpcenter/website/overview/generic_present.htm](https://webgate.ec.europa.eu/edamis/helpcenter/website/overview/generic_present.htm)

**Description:** The electronic Data files Administration and Management Information System (eDAMIS) is the integrated environment for data transmission and for the Single Entry Point for data arriving at Eurostat. It incorporates the family of existing tools. EDAMIS is visible through the following tools:

- **EWA:** The [EDAMIS Web Application](https://webgate.ec.europa.eu/edamis/helpcenter/website/overview/generic_present.htm) is installed in the National Statistical Institutes and used for sending statistical data files to Eurostat. Interactive, semi-automated and full-automated transmissions are supported.
- **EWP:** The [EDAMIS Web Portal](https://webgate.ec.europa.eu/edamis/helpcenter/website/overview/generic_present.htm) is installed at the European Commission and used for managing the dataset inventory, managing the user rights related to the transmissions, sending statistical data files to Eurostat (as an alternative to EWA) and monitoring the traffic through its Management Information System.
- **EWF:** [EDAMIS Web Forms](https://webgate.ec.europa.eu/edamis/helpcenter/website/overview/generic_present.htm) is a component of the EDAMIS Web Portal that can be used for the transmission of low volumes of data. It offers all the basic functions of EDAMIS and does not require any installation on the PC of the user.

**Name:** European Competition Network (ECN)

**Further information:** [http://ec.europa.eu/competition/ecn/index_en.html](http://ec.europa.eu/competition/ecn/index_en.html)

**Description:** European Competition Network (ECN) enables cooperation of the European Commission and the national competition authorities in all the Member States. The basic foundations of the ECN are established in the "Commission Notice on cooperation within the Network of Competition Authorities" and in the "Joint Statement of the Council and the Commission on the Functioning of the Network of Competition Authorities".

The cooperation is performed via following activities: informing each other of new cases and envisaged enforcement decisions, coordinating investigations, where necessary, helping each other with investigations, exchanging evidence and other information, and discussing various issues of common interest. The result is an effective mechanism to counter companies which engage in cross-border practices restricting competition. European competition rules are applied by all members of the ECN, and therefore the ECN supports and ensures their effective and consistent application.

Furthermore, ECM enables cooperation and exchange of best practises in the area of merger control by setting up an [EU Merger Working Group](https://webgate.ec.europa.eu/edamis/helpcenter/website/overview/generic_present.htm). The key objective of the working group is to foster increased consistency, convergence and cooperation among EU merger jurisdictions.

| Description:             | Cosmetic Products Notification Portal (CPNP) is a free of charge online notification system created for the implementation of Regulation (EC) No 1223/2009 on cosmetic products. When a product has been notified in the CPNP, there is no need for any further notification at national level within the EU. Regulation (EC) No 1223/2009 (Article 13) requires that the responsible persons and distributors must encode the relevant information on the products they place or make available on the European market. The CPNP is making this information available electronically to:  
  • Competent Authorities (for the purposes of market surveillance, market analysis, evaluation and consumer information); and  
  • Poison Centres or similar bodies established by EU countries (for the purposes of medical treatment). The CPNP also contains a separate module (Article 16) for cosmetic products containing nanomaterials. |

<table>
<thead>
<tr>
<th>Name:</th>
<th>TBT</th>
</tr>
</thead>
</table>
| Description:          | The Agreement on Technical Barriers to Trade (the TBT Agreement) is a multilateral agreement administered by the World Trade Organisation (WTO). While allowing all WTO countries to maintain their right to adopt regulations to pursue legitimate objectives - e.g. the protection of public health, consumers, and the environment - the TBT Agreement aims to:  
  - prevent the creation of unnecessary technical barriers to international trade;  
  - prevent adoption of protectionist measures;  
  - encourage global harmonisation and mutual recognition; and  
  - enhance transparency.  
As the EU-TBT Contact Point, the TBT database provides information on each TBT notification and the related dialog. |
## eGovernment Services for Citizens and Businesses

### Availability of eServices for Citizens and Businesses

#### Name: EUROPA - web portal

**Website:** [http://europa.eu/index_en.htm](http://europa.eu/index_en.htm)

**Description:** EUROPA, the web portal of the European Union, was launched in February 1995 on the occasion of the G7 ministerial meeting on the Information Society in Brussels. The portal includes basic information on how the EU works, latest EU news and events, as well as links to the websites of EU institutions and agencies. The site is run by the Communication department of the European Commission on behalf of the EU institutions.

The EUROPA portal is designed to be as user-friendly as possible in line with the EU Institutions’ commitment to openness and is compliant with the guidelines of the Web Accessibility Initiative (WAI, level 1).

#### Name: European Union Open Data Portal

**Description:** The European Union Open Data Portal is the single point of access to a growing range of data from the institutions and other bodies of the European Union (EU). Data are free for you to use and reuse for commercial or non-commercial purposes.

By providing easy and free access to data, the portal aims to promote their innovative use and unleash their economic potential. It also aims to help foster the transparency and the accountability of the institutions and other bodies of the EU.

The EU Open Data Portal is managed by the Publications Office of the European Union. Implementation of the EU’s open data policy is the responsibility of the Directorate-General for Communications Networks, Content and Technology of the European Commission.

#### Name: European Employment Services (EURES)

**Description:** The Eures Employment Services (EURES) is a cooperation network coordinated by the European Commission. The network is designed to facilitate the free movement of workers within the European Economic Area; Switzerland is also involved. Partners in the network include public employment services, trade union and employers' organisations.

The network is complemented by the European Job Mobility Portal, which offers jobseekers powerful search functionalities on Europe-wide job vacancies in 31 European countries. In addition, jobseekers can also create their CV online allowing potential employers to search for suitable candidates.
| Name: EU Social Security Coordination | Website: http://ec.europa.eu/social/main.jsp?langId=en&catId=849 |
| Description: The rules on social security coordination do not replace national systems with a single European one. The Member States are free to decide who is to be insured under their legislation, which benefits are granted and under what conditions. The EU provides **common rules** to protect social security rights when moving within Europe (EU-27, Iceland, Liechtenstein, Norway and Switzerland). The site provides information on the common rules, and easy access to EU and national information on the social security rights and obligations of citizens on the move in Europe, and consolidates national and European information sources. |

| Name: Public Health Portal | Website: http://ec.europa.eu/health/index_en.htm |
| Description: The Public Health Portal resulted from the Community Public Health Programme 2003-2008. The portal aims to help meet EU objectives in **public health** and provides a wide range of information and data on health-related issues and activities at both European and international levels. The target audience comprises both citizens who want to be informed on issues affecting their health, and health professionals, administrations, policy makers and stakeholders. Health-EU has received a certificate of compliance for 2011-13 with the code of conduct **HON code**, awarded by the **Health On the Net** (HON) foundation based in Geneva. |

| Name: PreLex | Website: http://eur-lex.europa.eu//collection/legislative-procedures.html |
| Description: PreLex is a **database of inter-institutional procedures**, aiming to facilitate monitoring of the decision-making process between the Commission and other institutions. The database follows all official documents (proposals, recommendations and communications) transmitted by the Commission to the legislator (the Council and the Parliament) and to other institutions and bodies. The database allows for easy access of relevant electronic documents available on Commission sites or external sites, such as EUR-Lex, the European Parliament’s site and the Site of the European Economic and Social Committee. Information stored in the database has covered the period since 1976 and is updated on a daily basis. |

| Name: EUR-Lex | Website: http://eur-lex.europa.eu/ |
| Description: The EUR-Lex portal is a **free and multilingual gateway to Community legislation online**, offering comprehensive access to European law. Available online sources include the Official Journal of the European Union, the Treaties and the legislation in force; the document series of the European Commission; the case-laws of the Court of Justice and the Court of First Instance; and the collection of consolidated legislation. It also provides links to other sources of information, such as the registers of the institutions and other legislative sites of the EU and the Member States. EUR-Lex offers sophisticated search facilities providing in-depth documentary and legal analysis. |
Name: Europass
Website: http://europass.cedefop.europa.eu/
Description: The Europass service, provided through a network of national centres and an internet portal, offers useful information and an interactive tool to create the Europass CV and the Europass Language Passport with the help of online tutorials and guidelines. The service is available in 26 languages.

Europass is completed by three additional documents (Europass Certificate Supplement, Europass Diploma Supplement and Europass Mobility) filled in and issued by the competent authorities.

Name: Your Voice in Europe
Website: http://ec.europa.eu/yourvoice/
Description: The 'Your Voice in Europe' portal was launched in October 2001 as part of the Interactive Policy Making initiative (IPM). The website targets both businesses and citizens (and in particular consumers), showing them how they can be actively involved in the Commission's policy making process. The users can present their views on new initiatives, discuss the future of Europe, provide feedback on how existing rules are applied, and even lodge complaints. The portal was designed using the Online Consultation Mechanism tool of the Online Questionnaire Management System of IPM. IPM was deactivated at the end of 2015 and replaced by the new application EUSurvey.

Name: Your Europe - Citizens
Website: http://ec.europa.eu/youreurope/citizens/index_en.htm
Description: ‘Your Europe’ was launched on 17 February 2005. It is a multilingual public information service portal for citizens and enterprises intending to carry out cross-border activities within the European Union.

With respect to citizens, the portal provides information on their rights and opportunities in the EU and the internal market, as well as advice on how to exercise these rights in practice. A variety of thematic areas is covered, such as moving to a new country, information on schooling, social security and finding employment, including country specific information. The broad spectrum of information is complemented by a selection of useful links to external sources, as well as access to the Your Europe Advice and SOLVIT services in support of both citizens and enterprises.

Name: Your Europe - Businesses
Website: http://ec.europa.eu/youreurope/business/index_en.htm
Description: ‘Your Europe’ was launched on 17 February 2005. It is a multilingual public information service portal for citizens and enterprises intending to carry out cross-border activities within the European Union.

The portal covers a variety of subjects concerning businesses, such as, registration of companies, public procurement, taxes, business directories, and various funding opportunities or employment laws. EU-wide and country specific information pages also contain useful links to external sources, as well as access to the Your Europe Advice and SOLVIT services in support of both citizens and enterprises.
**Name:** SOLVIT-Citizens (Solving problems on misapplication of Community Law)

**Website:** [http://ec.europa.eu/solvit/](http://ec.europa.eu/solvit/)

**Description:** SOLVIT is an online problem solving network in which EU Member States work together to solve problems caused by the misapplication of the Internal Market law by public authorities without resort to legal proceedings. There is a SOLVIT centre in every European Union Member State (as well as in Norway, Iceland and Liechtenstein). SOLVIT Centres handle complaints from citizens and businesses and are committed to providing real solutions to problems within ten weeks. Using SOLVIT is free of charge.

SOLVIT has been operating since July 2002. The European Commission coordinates the network, provides database facilities and, when needed, helps speed up the resolution of problems. Related cases may be submitted by e-mail, post or fax, but also online by using the relevant submission service.

**Name:** SOLVIT–Businesses (Solving problems on misapplication of Community Law)

**Website:** [http://ec.europa.eu/solvit/](http://ec.europa.eu/solvit/)

**Description:** Beyond citizen-oriented services, the online problem-solving network SOLVIT also provides solutions to businesses, addressing a variety of issues such as dealing with administrative obstacles, unjustified refusal of access to a national market, or problems in receiving reimbursement of VAT.

**Name:** Joinup

**Website:** [https://joinup.ec.europa.eu](https://joinup.ec.europa.eu)

**Description:** Joinup is a collaborative platform created by the European Commission and funded by the European Union via the Interoperability Solutions for Public Administrations (ISA²) Programme. It offers several services that aim to help e-Government professionals share their experience with each other.

Joinup involves eGovernment and interoperability professionals from all over Europe. Professionals from other countries outside the EU are welcomed to join. Joinup offers relevant content and insight in various areas of interest, including among others:

- Cross-border and cross-sector interactions between public administrations;
- Pan-European electronic public services;
- Legal information on usage and development of open-source software within public administrations;
- Interoperability impact of EU regulations and actions;
- Access to a repository of reusable interoperability solutions;
- Methodologies and practice aids on the development of interoperability solutions;
- Pan-European e-Government projects

The Joinup platform is based on the [Drupal](https://www.drupal.org) web content management system, and can be downloaded here: [Joinup project](https://joinup.ec.europa.eu).
| Description: The objective of the Learning Opportunities and Qualifications in Europe Portal is to facilitate **access to information on learning opportunities and qualifications** in Europe with a view to supporting mobility throughout Europe for education and training purposes. The portal allows direct queries on the content of national databases of learning opportunities and national qualifications and offers direct links to further relevant information. The portal also facilitates comparison of national qualifications frameworks through the European Qualifications Framework (EQF). Students, job seekers, workers, parents, teachers and guidance counsellors can benefit from the information offered. The portal is supported under the Erasmus+ Programme and supervised by the Directorate-General for Employment, Social Affairs and Inclusion (DG EMPL). |

| Description: A European citizens' initiative is an invitation to the European Commission to propose legislation on matters where the EU has competence to legislate. A citizens' initiative has to be backed by at least one million EU citizens, coming from at least 7 out of the 28 member states. A minimum number of signatories is required in each of those 7 member states. The rules and procedures governing the citizens' initiative are set out in an [EU Regulation No 211/2011](http://eur-lex.europa.eu/eli/reg/2011/211/oj) adopted by the European Parliament and the Council of the European Union in February 2011. |

| Name: Enterprise Europe Network | Website: [http://een.ec.europa.eu/](http://een.ec.europa.eu/) |
| Description: Established as part of the [Competitiveness and Innovation Framework Programme (CIP)](http://eur-lex.europa.eu/eli/reg/2011/211/oj), the network includes approx. 600 partner organisations in more than 40 countries. It offers comprehensive support and practical advice on EU legislation, and on finding business and funding opportunities. Main target is to support small and medium enterprises (SMEs), even though availability extends to all businesses, research centres and universities across Europe. The network also supports development of the research and innovation capacities of SMEs via its **business and technology cooperation database**, which provides information on tender opportunities, international networking, and partners' search facilities. |
### VAT Information Exchange System (VIES) - Businesses

**Further information:** [http://ec.europa.eu/taxation_customs/taxation/vat/](http://ec.europa.eu/taxation_customs/taxation/vat/)

**Description:**
With the completion of the Single Market, on 1 January 1993, fiscal customs based controls at internal frontiers were abolished and a new VAT control system was put in place for intra-Community trade. The most significant benefit was the reduction of the administrative burden on companies with the elimination of some 60 million customs documents per year. The computerised VIES manages the flow of the data held across national VAT administrations, while enabling them to monitor and control the flow of intra-Community trade and to detect all kinds of irregularities.

The system enables enterprises to obtain rapid confirmation of the VAT numbers of their trading partners. In addition, the European Commission maintains an [Online VAT Validation Service](http://ec.europa.eu/taxation_customs/taxation/vat/), which allows any member of the public to access parts of the VIES system and obtain confirmation on the validity of VAT identification numbers.

### TED - Tenders Electronic Daily

**Website:** [http://ted.europa.eu](http://ted.europa.eu)

**Description:**
The TED-Tenders Electronic Daily service is an online database of the [Publications Office](http://ec.europa.eu/taxation_customs/index_en.htm) of the European Union, which contains details of all public procurement invitations to tender published in the Supplement to the Official Journal of the European Union (S series, Official Journal S or OJ S).

The database holds information on public tenders above some specific contract values and is updated five times a week with approximately 1 500 public procurement notices from the European Union, the European Economic Area and beyond. It provides facilities for browsing, searching and sorting procurement notices by country, region, business sector and more. Information about each and every procurement document is published in all of the 23 official EU languages. Access to the database is free of charge.

### Taxation and Customs Union

**Website:** [http://ec.europa.eu/taxation_customs/index_en.htm](http://ec.europa.eu/taxation_customs/index_en.htm)

**Description:**
This is the web site managed by the Commission's Taxation and Customs Union Directorate-General, which takes an active part in the achievement of the strategic aims of the European Union. In this context it aims to:

- manage, defend and develop the customs union as a vital part of protecting the external borders of the EU;
- tackle the tax obstacles that currently prevent individuals and companies from operating freely across borders and from exploiting the full benefit of the Internal Market and encourage changes to tax systems so that they support Community objectives such as competitiveness and sustainable development;
- Respond effectively to the international challenges associated with customs and tax policies;
- Facilitate better co-operation between Member States to combat tax and customs fraud;
- It engages regularly in open dialogue with stakeholders and interested parties in order to ensure that rules and proposals keep pace with the reality of rapid change.
### Name: Open e-PRIOR electronic procurement platform

**Further information:** [https://joinup.ec.europa.eu/software/openeprior/description](https://joinup.ec.europa.eu/software/openeprior/description)

**Description:** 'Open e-PRIOR' is an open-source eProcurement platform, developed under the ISA programme, by DG Informatics (DIGIT). It was deployed within DIGIT in 2009. The platform plays the role of an intermediary between back office applications of a public administration and the Pan-European Public Procurement OnLine (PEPPOL) interoperability platform. It is connected to PEPPOL via its own Access Point, facilitating the cross-border exchange of eProcurement documents between, for example, a public administration in country A with suppliers in country B.

Open e-PRIOR currently covers post-award e-procurement, i.e. documents exchanged between the public administration and its contractors after the award of a contract, such as catalogues of goods or services, orders and invoices.

### Name: e-Justice – European e-Justice Portal

**Website:** [https://e-justice.europa.eu/home.do](https://e-justice.europa.eu/home.do)

**Description:** The European e-Justice Portal is conceived as a future electronic one-stop-shop in the area of justice. It provides information on justice systems and improving access to justice throughout the EU, in 23 languages.

### Name: Business Registers Interconnection System (BRIS)

**Website:** Expected to go live on June 2017.

**Description:** Following the Directive 2012/17/EU, a system of interconnected business registers is being set up at EU level, under a joint effort of all the EU Member States and the European Commission. The resulting system is known as the Business Registers Interconnection System (BRIS) and is expected to go live on 8 June 2017.

BRIS will aim to ensure access at EU level to information on companies registered in the Member States, and to enable, for the first time, the electronic communication between all EU business registers. They will be able to exchange information in relation to foreign branches and cross-border mergers of companies.

As a result, BRIS will enable citizens, businesses and national authorities to search, via the e-Justice portal, for information filed by companies in the national registers. Furthermore, the new system will improve the communication between registers by allowing them to exchange trustworthy information on companies between each other.

### Name: European Consumer Centres Network (ECC - Net)

**Description:** The Network of the European Consumer Centres (ECC-Net) provide information, advice and assistance to consumers living in the EU, Norway or Iceland on their cross-border purchases. The ECC-Net is co-financed by the European Commission and national governments in order to make sure that everyone can take full advantage of the European Single Market, wherever, whatever or however they buy.

With the help of ECCs, consumers are better informed about their rights. They make better choices and they can also reach an agreement with
traders on their own should there be a problem during or after the purchase. In case of more difficult cases, they can reach out to ECCs for individual assistance with their specific complaints. This support is provided in 23 European languages, Norwegian and Icelandic and it is free of charge.

The Network also pools its expertise to provide information on topical issues to consumers. For example, they developed a travel app for consumers to help consumers to cope with difficult situations when on holidays abroad.

Where ECC-Net is not successful in brokering a satisfactory agreement between traders and consumers, they will advise consumers on other options to achieve redress for example to use the court or the out-of-court dispute resolution scheme best suited to their case.

The Centres also produce studies and reports as input to policy development, and work with enforcement authorities.

### Name: Market Access Database (MADB)
### Website: [http://madb.europa.eu](http://madb.europa.eu)
### Description:

The Market Access Database (MADB) supports European companies wanting to export from the EU to third countries.

The system provides data on tariffs, duties and taxes; procedures and documents required for customs clearance in the partner country; statistics on trade flows; information on trade barriers affecting exports; sanitary and phyto-sanitary measures; preferential agreements and rules of origin; and services for small and medium enterprises.

### Name: Export Helpdesk (EH)
### Website: [http://exporthelp.europa.eu](http://exporthelp.europa.eu)
### Description:

The Export Helpdesk system (EH) provides information to companies that want to export to the European Union.

With a few clicks, companies can find the EU tariffs, requirements, preferential arrangements, quotas and statistics relating to imports from trade partner countries.

### Name: Tron.TDI
### Description:

Trade defence instruments (TDI) include anti-dumping and anti-subsidy instruments. They aim at ensuring a level playing field on the EU market between domestic (EU) and foreign producers.

In the context of the various stages of a TDI investigation (e.g. submission of a complaint, response to a questionnaire, submissions and observations) companies may submit relevant information.

The Tron.TDI system aims to support the exchange of information between the European Commission and the interested parties.
Name: **OSN – One Stop Notifications**  
**Website:** [https://webgate.ec.europa.eu/osn/help/notifying_party/whnjs.htm](https://webgate.ec.europa.eu/osn/help/notifying_party/whnjs.htm)  
**Description:** One Stop Notification (OSN) is a web-based tool, allowing manufacturers of radio equipment to notify via a secure link and through a single procedure their intention to place products on the market of Member States. The tool:  
1. Communicates this information to relevant contact points in Member States.  
2. Stores information that has been notified for consultation by Member States.  
3. Provides reports, supporting the operation of Directive 1999/5/EC.

Name: **ERASMUS for Young Entrepreneurs**  
**Website:** [https://webgate.ec.europa.eu/erasmusentrepreneurs/](https://webgate.ec.europa.eu/erasmusentrepreneurs/)  
**Description:** Erasmus for Young Entrepreneurs is a pilot project initiated by the EU. It aims at helping new entrepreneurs to acquire relevant skills for managing a small or medium-sized enterprise (SME) by spending time in a more experienced enterprise in another EU country. By exchanging knowledge and business ideas, new entrepreneurs can improve their know-how while, more experienced ones, can benefit from new fresh ideas. This international experience is partially financed by the European Commission in the context of the development of new small or medium-sized enterprises.  

The interested parts may enrol in this project by filling in the registration form from our IT Tool:  
You can also access our user management tool through the following link (managing applications, relations, search and match, etc.):  

Please refer to our web site for more information on Erasmus for Young Entrepreneurs and frequently asked questions:  

Name: **CERTIDER**  
**Description:** Central European Register of Certified Defence related-products Recipients (Undertakings) by National Competent Authorities.  

It is set up in the context of the ‘Directive 2009/43/EC of the European Parliament and of the Council of 6 May 2009 simplifying terms and conditions of transfers of defence-related products within the Community’, stating that:  
1. intra-Community transfers of defence-related products should be subject to prior authorisation through transfer licences granted or published by Member States; and  
2. intra-Community transfers of defence-related products under transfer licences should only be made to certified European defence Undertakings i.e. companies which have been designated by a Competent Authority within their Member State as fulfilling the terms and conditions of a transfer licence.
Certider is the secure web-based application developed to support the exchange of defence Undertaking certification information between Member States and the European Commission.

**Name:** NANDO - New Approach Notified and Designated Organisations

**Description:** In order to trade within the EU, it is a legal requirement that products conform with the European legislation. CE - marking testifies of product conformance with the legislation and is delivered by duly accredited attestation organisations (known as "Bodies") within each Member State. The NANDO Information System is the access point to consult regulatory information about such Bodies responsible for carrying conformity assessment procedures for products marketed in the European Union, and their respective competence areas. NANDO currently covers most published EU legislation, including the Construction Product Regulation (EU) No 305/2011 (CPR) and the 73/23/EEC Low Voltage Directive.

The restricted part of NANDO, NANDO-INPUT is a tool designed to formally designate the bodies as conformity assessment bodies.

Its use is restricted to those persons officially identified by Member State authorities as authorised to designate bodies.

It covers:

- Creation of notifications (details of the body + directives);
- Submission of notifications to the Commission; and
- Update of notifications.

NANDO Information System is the online access point to consult regulatory information about such Bodies responsible for carrying conformity assessment procedures for products marketed in the European Union, and their respective competence areas.

It is a web application on Europa showing information relative to notified bodies under the new approach Directives. Because the Official Journal is published at irregular intervals the Commission fulfils its legal obligation to publish certain information by making it available on the Europa site.

**Name:** KETs - Key Enabling Technologies Tools

**Website:** [https://ec.europa.eu/growth/tools-databases/kets-tools/](https://ec.europa.eu/growth/tools-databases/kets-tools/)

**Description:** KETs Tools is an online platform for monitoring the so-called Key Enabling Technologies (KETs). Key Enabling Technologies are those technologies which are increasingly driving innovation today and are expected to continue to be major drivers of economic growth tomorrow. These include: nanotechnology, industrial biotechnology, advanced materials, micro- and nano electronics, photonics and advanced manufacturing technologies.

The website offers 2 modules i.e.

- KETs Observatory Used is to identify the trends, opportunities and economic significance of each Key Enabling Technology for EU and national policy makers; and
- KETs Technology Infrastructures Inventory of technological service centres active in Europe in the field of Key Enabling Technologies.

</thead>
</table>
| Description: This is a public website responsible for the dissemination of Customs and Taxation information to the public. It provides for example:  
• information regarding the National authorities related to Customs  
• information regarding Binding Tariff Information  
• information regarding chemical substance by querying the repository of 300,000 chemical substances in all Community languages along with their tariff classification in the Combined Nomenclature.  
• information regarding the Economic Operators  
• information regarding the movements of goods for export  
• information on the Excise Number. If the excise number exists, the system also permits to know which kind of excise product the Economic Operator is permitted to handle.  
• information regarding the surveillances of goods within the Customs business  
• information regarding the suspensions in force and in preparation. It provides for a total or partial waiver of the normal duties applicable to imported goods during a certain period and for an unlimited quantity.  
• information regarding Tariff data such as TARIC code, associated measures, regulations, tariff duties and conditions on those tariff duties (presentation of certificates), geographical data, tariff quota information  
• information of the status of a movement of goods, and a graphical view of the movement of goods in transit through the EU,  
• information on the main taxes in force in EU Member States and on the reforms in personal income tax, corporate income taxes, VAT, EU harmonised excise duties and social security contributions.  
• Member State information on invoicing rules, VAT refunds and the standard VAT rate. |
• Tax Identification Numbers used by EU countries to identify taxpayers.
• Information for checking the validity of a VAT number issued by an EU Member State.

<td>See website of each Member State.</td>
</tr>
<tr>
<td>Description</td>
<td>MOSS is a Trans-European IT System (group of electronic processes) allowing taxable persons established within the Community but not in the Member State where the telecommunications, broadcasting and electronic services are supplied, and trading in more than one Member States to fulfil their VAT obligations in a single place of compliance, which would be the Member State where they are established. This special scheme is defined by Council Directive 2008/8/EC, amending the Council Directive 2006/112/EC, for simplifying the obligations of EU trader in the context of distant services provided to EU non-taxable persons and more specifically telecommunication services, broadcasting services and electronic services. The special scheme allows a registered taxable person to account for all services supplied to customers in other Member States in a single VAT Return submitted to his Member State of establishment (named Member State of identification) without being obliged to be registered for VAT purposes in the other Member States. Similarly, the special scheme for taxable persons not established within the Community (VoeS) is extended to cover the above mentioned services.</td>

| Description               | The new public procurement Directives 2014/23/EU, 2014/24/EU and 2014/25/EU specifically mention that tools and devices used for communicating electronically should be non-discriminatory, generally available, and interoperable. To allow for the transition in all Member States, both electronic and paper versions of the ESPD may co-exist in the interim period until 18 April 2018. Therefore, the ESPD is available in a paper form, as a functionality embedded directly into the national e-procurement solutions or via a web-service. Regarding the latter, the European Commission provides a free ESPD web-service. It will enable:  
  • The buyer to design and reuse an ESPD template with the exclusion and selection criteria; and  
  • The tenderers to fill in, refill and print the ESPD for a given procedure. The information provided in via the ESPD in the past can be reused as long as it remains correct. |
The factsheets present an overview of the state and progress of eGovernment in European countries.

Joinup is a joint initiative by the Directorate General for Informatics (DG DIGIT) and the Directorate General for Communications Networks, Content & Technology (DG CONNECT).

An action supported by ISA

This action is supported by ISA, the European Commission’s programme for interoperability solutions for European public administrations.

Why ISA?

Administrative procedures have the reputation of being lengthy, time-consuming and costly. Electronic collaboration between public administrations can make these procedures quicker, simpler and cheaper for all parties concerned, in particular when transactions need to be carried out cross-border and/or cross-sector. ISA supports this type of electronic collaboration.

With more than 40 actions it provides tools, services and frameworks for the modernisation of public administrations in Europe, across e-borders and sectors.
